## Explanations

1.**200**

It is given that the applications are scheduled for processing in twenty 15-minute slots starting at 9:00 am and ending at 2:00 pm. Ten applications are scheduled in each slot.

Hence, the total number of applicants = (20*10) = 200. It is also known that 50% of the applications were US applications, and the number of US applications was the same in all the slots. The same was true for the other three categories.

Hence, the number of total number of US applicants = (200*50%) = 100, and the number of US applicants in each slot = (100/20) = 5

It is also known that Ira, Vijay, and Nandini were scheduled for Schengen visa processing in that order. They had a 9:15 am slot. Since the number of Schengen applicants was the same in all the slots, it implies the number of Schengen applicants in each slot is at least 3.

Similarly, it is given that Mahira and Osman were scheduled in the 9:30 am slot on that day for visa processing in the Others category, which implies the number of other category applicants in each slot is at least 2. Since the number of total applicants in each slot is 10, this implies the number of Schengen and other applicants in each slot is 3, and 2, respectively. Hence, the number of UK applicants is 0 in each slot.

It is also known that the number of total counters is 10, among which four are dedicated to US applications, and two each for UK applications, Schengen applications, and Others applications. It is given that each US and UK application requires 10 minutes of processing time, and Vijay was called to a counter at 9:25 am. (Who is 5th in the queue). It can only be possible when the processing time of Schengen applications is 12.5 minutes.

| US (10 min) | | | | Schengen (12.5 min) | | Others (5 min process) | |
|---|---|---|---|---|---|---|---|
| End Time | | | | End Time | | End Time | |
| C1 | C2 | C3 | C4 | C1 | C2 | C1 | C2 |
| 9.10 | 9.10 | 9.10 | 9.10 | 9.12.30 | 9.12.30 | 9.05 | 9.05 |
| 9.20 | 9.25 | 9.25 | 9.25 | 9.25 | 9.32.30 | 9.20 | 9.20 |
| 9.30 | 9.35 | 9.40 | 9.40 | 9.37.30 | 9.45 | 9.35 | 9.35 |
| 9.40 | 9.45 | 9.50 | 9.55 | | | | |
| 9.55 | 9.55 | 10.00 | 10.05 | | | | |
| 10.10 | 10.10 | 10.10 | 10.15 | | | | |
| 10.20 | | | | | | | |
| | | | | | | | |

On a particular day, Ira, Vijay, and Nandini were scheduled for Schengen visa processing in that order. They had a 9:15 am slot but entered the VPO at 9:20 am. When they entered the office, exactly six out of the ten counters were either processing applications, or had finished processing one and ready to start processing the next. Hence, at 9.20 am, there are exactly four free counters. Out of these 4, 2 is the UK counter, and the other two are other counters. (Since the US counters and Schengen Counters were either processing applications, or had finished processing one and were ready to start processing the next.)

For the other applicants, the time taken to process one application is at most 5 minutes, which implies the total time taken to process 40 applications is at most (40*5) = 200 minutes.

VIDEO SOLUTION

2. **2**

It is given that none of the streets has more than one team traveling along it in any direction at any point in time (point 1), which implies at 9.00 hrs, all 4 teams have chosen different roots from the starting point.

It is also known that Teams 2 and 3 are the only ones in stations E and D respectively at 10:00 hrs, and Team 1 and Team 4 are the only teams that patrol the street connecting stations A and E.

It is only possible when Team 2 traveled (A-E) via F, and Team 3 reached station D via station C.

It is also known that Teams 1 and 3 are the only ones in Station E at 10:30 hrs, and Team 4 never passes through Stations B, D, or F. Hence, Team 1 must have chosen the (A-B) root at the starting point, and Team 4 has chosen the (A-E) root at 9.00 hrs.

Hence, Team 1 will reach B at 9.30, and come to A at 10.00 hrs. After that, they will go to E at 10.30 hrs.

Since Team 4 never passes through stations B, D, or F. Team 4 only can pass through stations A, E, and C.

Hence, the roots of team 4 to reach station E at 11.30 will be (A-E-A-C-A-E) or (A-E-A-E-A-E).

Since team 1 is already traveling to E from A at 10.00 hrs, at that time team 4 can't choose the same route. Hence, the final route for team 4 to reach E at 11.30 is (A-E-A-C-A-E), and at 12.00 hrs, team 4 will come back to station A.

Hence, the complete route diagram for team 4 is (A-E-A-C-A-E-A)

| Teams | 9.00 | 9.30 | 10.00 | 10.30 | 11.00 | 11.30 | 12.00 |
|---|---|---|---|---|---|---|---|
| 1 | A | B | A | E | | | |
| 2 | A | F | E | | | | |
| 3 | A | C | D | | | | |
| 4 | A | E | A | C | A | E | A |

We can see that team 1 is at station E at 10.30 hrs, and they will reach station B at 11.30 hrs, which is only possible when they travel to B via A.

Hence, the complete route diagram for team 1 is (A-B-A-E-A-B-A). It is also known that Teams 1 and 3 are the only ones in station E at 10:30 hrs.

| Teams | 9.00 | 9.30 | 10.00 | 10.30 | 11.00 | 11.30 | 12.00 |
|---|---|---|---|---|---|---|---|
| 1 | A | B | A | E | A | B | A |
| 2 | A | F | E | | | | |
| 3 | A | C | D | E | | | |
| 4 | A | E | A | C | A | E | A |

The only possible root for Team 2 at 10.00 hrs is from E to F since they can't choose E to D because Team 3 is already on this route. Since team 3 has to reach A at 12.00. The only possible combination for team 3 is E-D-C-A

| Teams | 9.00 | 9.30 | 10.00 | 10.30 | 11.00 | 11.30 | 12.00 |
|---|---|---|---|---|---|---|---|
| 1 | A | B | A | E | A | B | A |
| 2 | A | F | E | F | | | |
| 3 | A | C | D | E | D | C | A |
| 4 | A | E | A | C | A | E | A |

Now the roots for team 2 going back to A is from F at 10.30 hrs (F-A-F-A) or (F-E-F-A).

Hence, the final table is given below:

| Teams | 9.00 | 9.30 | 10.00 | 10.30 | 11.00 | 11.30 | 12.00 |
|---|---|---|---|---|---|---|---|
| 1 | A | B | A | E | A | B | A |
| 2 | A | F | E | F | A/E | F | A |
| 3 | A | C | D | E | D | C | A |
| 4 | A | E | A | C | A | E | A |

From the table, we can see that the teams have passed through B 2 times in this given period.

VIDEO SOLUTION

3.**B**

| | | |
|---|---|---|
| P (2) | Sociology | B, C |
| Q (1) | Anthropology/ Sociology | Either F or G |
| R (2) | Economics | A, Either of D/ E/ H |
| S (1) | Sociology/ Anthropology | G/ F |
| T (2) | Economics | Any two of the D/ E/ H |

| 09:00 | | | 09:30 | | | 10:00 | | | 10:30 | | |
|---|---|---|---|---|---|---|---|---|---|---|---|
| Teacher | Student | Subject | Teacher | Student | Subject | Teacher | Student | Subject | Teacher | Student | Subject |
| T | | Economics | T | | Economics | R | A | Economics | R | | Economics |
| | | Sociology | | B | Sociology | | | | | F | Anthropology |
| | | | | G | Sociology | | | | | | |

Now D is scheduled in the slot immediately before Q. In that case Q will be in the 9:30 slot and D will be in the 9:00 am slot. Hence D will be mentored by T and one of E/H will be mentored by R and the other by T. Obviously E is guided by R is not necessarily true as he can be mentored by T also.

VIDEO SOLUTION

4.**D**

Let's look at all the students we have A,B,C,D,E,F,G,H. The guides are P,Q,R,S,T and they mentor 2,1,2,1,2 students respectively.

Slots are 9:00,9:30,10:00,10:30 . Moreover economics, sociology and anthropology have 4,3,1 students respectively.

Now from 5th statement, two sociology seminars and economics seminars are held in the same slot. This will not take place at 10:00(only one seminar is scheduled at 10:00), this will also not take place at 10:30( An anthropology seminar is scheduled at 10:30 and maximum three seminars are scheduled in a slot. Hence this will happen at either 9 or 9:30. Now from (7) A and G are scheduled in consecutive slots. A is scheduled at 10:00. Hence G will be scheduled at 9:30. SO from (5), there will be three students having their seminars at 9:30.

Combining this data with the remaining points we get the following table

| | | |
|---|---|---|
| P (2) | Sociology | B, C |
| Q (1) | Anthropology/ Sociology | Either F or G |
| R (2) | Economics | A, Either of D/ E/ H |
| S (1) | Sociology/ Anthropology | G/ F |
| T (2) | Economics | Any two of the D/ E/ H |

Moreover we do know that students having same subject are scheduled in consecutive slots. So we get

| 09:00 | | | 09:30 | | | 10:00 | | | 10:30 | | |
|---|---|---|---|---|---|---|---|---|---|---|---|
| Teacher | Student | Subject | Teacher | Student | Subject | Teacher | Student | Subject | Teacher | Student | Subject |
| T | | Economics | T | | Economics | R | A | Economics | R | | Economics |
| | | Sociology | | B | Sociology | | | | | F | Anthropology |
| | | | | G | Sociology | | | | | | |

As we can see from the above table, P,Q and S are not guiding any economics student

VIDEO SOLUTION

5. **A**

Let's look at all the students we have A,B,C,D,E,F,G,H. The guides are P,Q,R,S,T and they mentor 2,1,2,1,2 students respectively.

Slots are 9:00,9:30,10:00,10:30 . Moreover economics, sociology and anthropology have 4,3,1 students respectively.

Now from 5th statement, two sociology seminars and economics seminars are held in the same slot. This will not take place at 10:00(only one seminar is scheduled at 10:00), this will also not take place at 10:30( An anthropology seminar is scheduled at 10:30 and maximum three seminars are scheduled in a slot. Hence this will happen at either 9 or 9:30. Now from (7) A and G are scheduled in consecutive slots. A is scheduled at 10:00. Hence G will be scheduled at 9:30. SO from (5), there will be three students having their seminars at 9:30.

Combining this data with the remaining points we get the following table

| | | |
|---|---|---|
| P (2) | Sociology | B, C |
| Q (1) | Anthropology/ Sociology | Either F or G |
| R (2) | Economics | A, Either of D/ E/ H |
| S (1) | Sociology/ Anthropology | G/ F |
| T (2) | Economics | Any two of the D/ E/ H |

Moreover we do know that students having same subject are scheduled in consecutive slots. So we get

| 09:00 | | | 09:30 | | | 10:00 | | | 10:30 | | |
|---|---|---|---|---|---|---|---|---|---|---|---|
| Teacher | Student | Subject | Teacher | Student | Subject | Teacher | Student | Subject | Teacher | Student | Subject |
| T | | Economics | T | | Economics | R | A | Economics | R | | Economics |
| | | Sociology | | B | Sociology | | | | | F | Anthropology |
| | | | | G | Sociology | | | | | | |

Here we can see that two seminars are scheduled in first slot.

VIDEO SOLUTION

6. **A**

It is given that the applications are scheduled for processing in twenty 15-minute slots starting at 9:00 am and ending at 2:00 pm. Ten applications are scheduled in each slot.

Hence, the total number of applicants = (20*10) = 200. It is also known that 50% of the applications were US applications, and the number of US applications was the same in all the slots. The same was true for the other three categories.

Hence, the number of total number of US applicants = (200*50%) = 100, and the number of US applicants in each slot = (100/20) = 5

It is also known that Ira, Vijay, and Nandini were scheduled for Schengen visa processing in that order. They had a 9:15 am slot. Since the number of Schengen applicants was the same in all the slots, it implies the number of Schengen applicants in each slot is at least 3.

Similarly, it is given that Mahira and Osman were scheduled in the 9:30 am slot on that day for visa processing in the Others category, which implies the number of other category applicants in each slot is at least 2. Since the number of total applicants in each slot is 10, this implies the number of Schengen and other applicants in each slot is 3, and 2, respectively. Hence, the number of UK applicants is 0 in each slot.

It is also known that the number of total counters is 10, among which four are dedicated to US applications, and two each for UK applications, Schengen applications, and Others applications. It is given that each US and UK application requires 10 minutes of processing time, and Vijay was called to a counter at 9:25 am. (Who is 5th in the queue). It can only be possible when the processing time of Schengen applications is 12.5 minutes.

| US (10 min) | | | | Schengen (12.5 min) | | Others (5 min process) | |
|---|---|---|---|---|---|---|---|
| End Time | | | | End Time | | End Time | |
| C1 | C2 | C3 | C4 | C1 | C2 | C1 | C2 |
| 9.10 | 9.10 | 9.10 | 9.10 | 9.12.30 | 9.12.30 | 9.05 | 9.05 |
| 9.20 | 9.25 | 9.25 | 9.25 | 9.25 | 9.32.30 | 9.20 | 9.20 |
| 9.30 | 9.35 | 9.40 | 9.40 | 9.37.30 | 9.45 | 9.35 | 9.35 |
| 9.40 | 9.45 | 9.50 | 9.55 | | | | |
| 9.55 | 9.55 | 10.00 | 10.05 | | | | |
| 10.10 | 10.10 | 10.10 | 10.15 | | | | |
| 10.20 | | | | | | | |
| | | | | | | | |

On a particular day, Ira, Vijay, and Nandini were scheduled for Schengen visa processing in that order. They had a 9:15 am slot but entered the VPO at 9:20 am. When they entered the office, exactly six out of the ten counters were either processing applications, or had finished processing one and ready to start processing the next. Hence, at 9.20 am, there are exactly four free counters. Out of these 4, 2 is the UK counter, and the other two are other counters. (Since the US counters and Schengen Counters were either processing applications, or had finished processing one and were ready to start processing the next.)

From the table, we can see that the first slot takes 20 minutes to complete, and after that remaining 19 slots take 15 minutes each to complete the US application process.

Hence, the total time taken = 20+15*19 = 305 minutes = 5 hrs 5 minutes. Hence, the time will be (9 am + 5hrs 5 minutes) = 2.05 pm

The correct option is A

VIDEO SOLUTION

7. **0**

It is given that the applications are scheduled for processing in twenty 15-minute slots starting at 9:00 am and ending at 2:00 pm. Ten applications are scheduled in each slot.

Hence, the total number of applicants = (20*10) = 200. It is also known that 50% of the applications were US applications, and the number of US applications was the same in all the slots. The same was true for the other three categories.

Hence, the number of total number of US applicants = (200*50%) = 100, and the number of US applicants in each slot = (100/20) = 5

It is also known that Ira, Vijay, and Nandini were scheduled for Schengen visa processing in that order. They had a 9:15 am slot. Since the number of Schengen applicants was the same in all the slots, it implies the number of Schengen applicants in each slot is at least 3.

Similarly, it is given that Mahira and Osman were scheduled in the 9:30 am slot on that day for visa processing in the Others category, which implies the number of other category applicants in each slot is at least 2. Since the number of total applicants in each slot is 10, this implies the number of Schengen and other applicants in each slot is 3, and 2, respectively. Hence, the number of UK applicants is 0 in each slot.

It is also known that the number of total counters is 10, among which four are dedicated to US applications, and two each for UK applications, Schengen applications, and Others applications. It is given that each US and UK application requires 10 minutes of processing time, and Vijay was called to a counter at 9:25 am. (Who is 5th in the queue). It can only be possible when the processing time of Schengen applications is 12.5 minutes.

| US (10 min) | | | | Schengen (12.5 min) | | Others (5 min process) | |

| C1 | C2 | C3 | C4 | C1 | C2 | C1 | C2 |
| 9.10 | 9.10 | 9.10 | 9.10 | 9.12.30 | 9.12.30 | 9.05 | 9.05 |
| 9.20 | 9.25 | 9.25 | 9.25 | 9.25 | 9.32.30 | 9.20 | 9.20 |
| 9.30 | 9.35 | 9.40 | 9.40 | 9.37.30 | 9.45 | 9.35 | 9.35 |
| 9.40 | 9.45 | 9.50 | 9.55 | | | | |
| 9.55 | 9.55 | 10.00 | 10.05 | | | | |
| 10.10 | 10.10 | 10.10 | 10.15 | | | | |
| 10.20 | | | | | | | |
| | | | | | | | |

On a particular day, Ira, Vijay, and Nandini were scheduled for Schengen visa processing in that order. They had a 9:15 am slot but entered the VPO at 9:20 am. When they entered the office, exactly six out of the ten counters were either processing applications, or had finished processing one and ready to start processing the next. Hence, at 9.20 am, there are exactly four free counters. Out of these 4, 2 is the UK counter, and the other two are other counters. (Since the US counters and Schengen Counters were either processing applications, or had finished processing one and were ready to start processing the next.)

From the table, we can say that the total number of UK applicants in each slot is zero, Hence, the total number of applicants is zero.

VIDEO SOLUTION

8. **B**

It is given that the applications are scheduled for processing in twenty 15-minute slots starting at 9:00 am and ending at 2:00 pm. Ten applications are scheduled in each slot.

Hence, the total number of applicants = (20*10) = 200. It is also known that 50% of the applications were US applications, and the number of US applications was the same in all the slots. The same was true for the other three categories.

Hence, the number of total number of US applicants = (200*50%) = 100, and the number of US applicants in each slot = (100/20) = 5

It is also known that Ira, Vijay, and Nandini were scheduled for Schengen visa processing in that order. They had a 9:15 am slot. Since the number of Schengen applicants was the same in all the slots, it implies the number of Schengen applicants in each slot is at least 3.

Similarly, it is given that Mahira and Osman were scheduled in the 9:30 am slot on that day for visa processing in the Others category, which implies the number of other category applicants in each slot is at least 2. Since the number of total applicants in each slot is 10, this implies the number of Schengen and other applicants in each slot is 3, and 2, respectively. Hence, the number of UK applicants is 0 in each slot.

It is also known that the number of total counters is 10, among which four are dedicated to US applications, and two each for UK applications, Schengen applications, and Others applications. It is given that each US and UK application requires 10 minutes of processing time, and Vijay was called to a counter at 9:25 am. (Who is 5th in the queue). It can only be possible when the processing time of Schengen applications is 12.5 minutes.

| US (10 min) | | | | Schengen (12.5 min) | | Others (5 min process) | |
|---|---|---|---|---|---|---|---|
| End Time | | | | End Time | | End Time | |
| C1 | C2 | C3 | C4 | C1 | C2 | C1 | C2 |
| 9.10 | 9.10 | 9.10 | 9.10 | 9.12.30 | 9.12.30 | 9.05 | 9.05 |
| 9.20 | 9.25 | 9.25 | 9.25 | 9.25 | 9.32.30 | 9.20 | 9.20 |
| 9.30 | 9.35 | 9.40 | 9.40 | 9.37.30 | 9.45 | 9.35 | 9.35 |
| 9.40 | 9.45 | 9.50 | 9.55 | | | | |
| 9.55 | 9.55 | 10.00 | 10.05 | | | | |
| 10.10 | 10.10 | 10.10 | 10.15 | | | | |
| 10.20 | | | | | | | |
| | | | | | | | |

On a particular day, Ira, Vijay, and Nandini were scheduled for Schengen visa processing in that order. They had a 9:15 am slot but entered the VPO at 9:20 am. When they entered the office, exactly six out of the ten counters were either processing applications, or had finished processing one and ready to start processing the next. Hence, at 9.20 am, there are exactly four free counters. Out of these 4, 2 is the UK counter, and the other two are other counters. (Since the US counters and Schengen Counters were either processing applications, or had finished processing one and were ready to start processing the next.)

Let's check the options.

Option A: The application process of Osman was completed before 9:45 am. => True (Since he is 5th in the queue, his process will end at 9.35 am)

Option B: The application process of Mahira started after Nandini's. => The application process for Mahira starts at 9.30 am, and the application process for Nandini starts at 9.32.30 am => False.

The correct option is B

VIDEO SOLUTION

9. **2**

It is given that none of the streets has more than one team traveling along it in any direction at any point in time (point 1), which implies at 9.00 hrs, all 4 teams have chosen different roots from the starting point.

It is also known that Teams 2 and 3 are the only ones in stations E and D respectively at 10:00 hrs, and Team 1 and Team 4 are the only teams that patrol the street connecting stations A and E.

It is only possible when Team 2 traveled (A-E) via F, and Team 3 reached station D via station C.

It is also known that Teams 1 and 3 are the only ones in Station E at 10:30 hrs, and Team 4 never passes through Stations B, D, or F. Hence, Team 1 must have chosen the (A-B) root at the starting point, and Team 4 has chosen the (A-E) root at 9.00 hrs.

Hence, Team 1 will reach B at 9.30, and come to A at 10.00 hrs. After that, they will go to E at 10.30 hrs.

Since Team 4 never passes through stations B, D, or F. Team 4 only can pass through stations A, E, and C.

Hence, the roots of team 4 to reach station E at 11.30 will be (A-E-A-C-A-E) or (A-E-A-E-A-E).

Since team 1 is already traveling to E from A at 10.00 hrs, at that time team 4 can't choose the same route. Hence, the final route for team 4 to reach E at 11.30 is (A-E-A-C-A-E), and at 12.00 hrs, team 4 will come back to station A.

Hence, the complete route diagram for team 4 is (A-E-A-C-A-E-A)

| Teams | 9.00 | 9.30 | 10.00 | 10.30 | 11.00 | 11.30 | 12.00 |
|---|---|---|---|---|---|---|---|
| 1 | A | B | A | E | | | |
| 2 | A | F | E | | | | |
| 3 | A | C | D | | | | |
| 4 | A | E | A | C | A | E | A |

We can see that team 1 is at station E at 10.30 hrs, and they will reach station B at 11.30 hrs, which is only possible when they travel to B via A.

Hence, the complete route diagram for team 1 is (A-B-A-E-A-B-A). It is also known that Teams 1 and 3 are the only ones in station E at 10:30 hrs.

| Teams | 9.00 | 9.30 | 10.00 | 10.30 | 11.00 | 11.30 | 12.00 |
|---|---|---|---|---|---|---|---|
| 1 | A | B | A | E | A | B | A |
| 2 | A | F | E | | | | |
| 3 | A | C | D | E | | | |
| 4 | A | E | A | C | A | E | A |

The only possible root for Team 2 at 10.00 hrs is from E to F since they can't choose E to D because Team 3 is already on this route. Since team 3 has to reach A at 12.00. The only possible combination for team 3 is E-D-C-A

| Teams | 9.00 | 9.30 | 10.00 | 10.30 | 11.00 | 11.30 | 12.00 |
|---|---|---|---|---|---|---|---|
| 1 | A | B | A | E | A | B | A |
| 2 | A | F | E | F | | | |
| 3 | A | C | D | E | D | C | A |
| 4 | A | E | A | C | A | E | A |

Now the roots for team 2 going back to A is from F at 10.30 hrs (F-A-F-A) or (F-E-F-A).

Hence, the final table is given below:

| Teams | 9.00 | 9.30 | 10.00 | 10.30 | 11.00 | 11.30 | 12.00 |
|---|---|---|---|---|---|---|---|
| 1 | A | B | A | E | A | B | A |
| 2 | A | F | E | F | A/E | F | A |
| 3 | A | C | D | E | D | C | A |
| 4 | A | E | A | C | A | E | A |

From the table, we can see that team 4 passed station E 2 times in a day

VIDEO SOLUTION

10. **D**

It is given that none of the streets has more than one team traveling along it in any direction at any point in time (point 1), which implies at 9.00 hrs, all 4 teams have chosen different roots from the starting point.

It is also known that Teams 2 and 3 are the only ones in stations E and D respectively at 10:00 hrs, and Team 1 and Team 4 are the only teams that patrol the street connecting stations A and E.

It is only possible when Team 2 traveled (A-E) via F, and Team 3 reached station D via station C.

It is also known that Teams 1 and 3 are the only ones in Station E at 10:30 hrs, and Team 4 never passes through Stations B, D, or F. Hence, Team 1 must have chosen the (A-B) root at the starting point, and Team 4 has chosen the (A-E) root at 9.00 hrs.

Hence, Team 1 will reach B at 9.30, and come to A at 10.00 hrs. After that, they will go to E at 10.30 hrs.

Since Team 4 never passes through stations B, D, or F. Team 4 only can pass through stations A, E, and C.

Hence, the roots of team 4 to reach station E at 11.30 will be (A-E-A-C-A-E) or (A-E-A-E-A-E).

Since team 1 is already traveling to E from A at 10.00 hrs, at that time team 4 can't choose the same route. Hence, the final route for team 4 to reach E at 11.30 is (A-E-A-C-A-E), and at 12.00 hrs, team 4 will come back to station A.

Hence, the complete route diagram for team 4 is (A-E-A-C-A-E-A)

| Teams | 9.00 | 9.30 | 10.00 | 10.30 | 11.00 | 11.30 | 12.00 |
|---|---|---|---|---|---|---|---|
| 1 | A | B | A | E | | | |
| 2 | A | F | E | | | | |
| 3 | A | C | D | | | | |
| 4 | A | E | A | C | A | E | A |

We can see that team 1 is at station E at 10.30 hrs, and they will reach station B at 11.30 hrs, which is only possible when they travel to B via A.

Hence, the complete route diagram for team 1 is (A-B-A-E-A-B-A). It is also known that Teams 1 and 3 are the only ones in station E at 10:30 hrs.

| Teams | 9.00 | 9.30 | 10.00 | 10.30 | 11.00 | 11.30 | 12.00 |
|---|---|---|---|---|---|---|---|
| 1 | A | B | A | E | A | B | A |
| 2 | A | F | E | | | | |
| 3 | A | C | D | E | | | |
| 4 | A | E | A | C | A | E | A |

The only possible root for Team 2 at 10.00 hrs is from E to F since they can't choose E to D because Team 3 is already on this route. Since team 3 has to reach A at 12.00. The only possible combination for team 3 is E-D-C-A

| Teams | 9.00 | 9.30 | 10.00 | 10.30 | 11.00 | 11.30 | 12.00 |
|---|---|---|---|---|---|---|---|
| 1 | A | B | A | E | A | B | A |
| 2 | A | F | E | F | | | |
| 3 | A | C | D | E | D | C | A |
| 4 | A | E | A | C | A | E | A |

Now the roots for team 2 going back to A is from F at 10.30 hrs (F-A-F-A) or (F-E-F-A).

Hence, the final table is given below:

| Teams | 9.00 | 9.30 | 10.00 | 10.30 | 11.00 | 11.30 | 12.00 |
|---|---|---|---|---|---|---|---|
| 1 | A | B | A | E | A | B | A |
| 2 | A | F | E | F | A/E | F | A |
| 3 | A | C | D | E | D | C | A |
| 4 | A | E | A | C | A | E | A |

From the table, we can see that 2 teams (teams 3 and 4) have passed through station C on the given day.

The correct option is D

VIDEO SOLUTION

11. **B**

It is given that

1 burger takes 10 minutes

1 ice cream takes 2 minutes and 3 portions of fries take 5 min by the machine (operator is not required).

Client 1 ordered 1 burger, 3 portions of fries and 1 ice cream.

The burger will take 10 minutes to finish. Meantime, rest of the order can be completed.

VIDEO SOLUTION

12. **B**
It is given that

1 burger takes 10 minutes

1 ice cream takes 2 minutes and 3 portions of fries take 5 min by the machine (operator is not required).

The employees are allowed to process multiple orders at a time, but the preference would be to finish orders of clients who placed their orders earlier.

The first order is 1 burger, 1 ice cream and 3 portions of fries.

Anish can start working on the burger and Bani can start working on the ice cream.

The burger will be done at 10:10, ice - cream at 10:02 and fries at 10:05.

The second order is placed at 10:05. (ice cream and fries)

Bani can work on the ice cream from 10:05 and also put the fries.

Only Bani will be free from 10:02 to 10:05 - 3 minutes.

The ice cream will be done by 10:07 but the fries will be done by 10:10.

Third order of 1 burger and 1 fries is placed at 10:07.

Bani will immediately start working on the burger. He will finish it by 10:17.

Anish would have finished the first burger at 10:10. Only he is free till 10:17 - 7 minutes.

Thus exactly one person is free for 10 minutes.

VIDEO SOLUTION

13. **A**
In the information, it is provided that there are four authors in the logistics department, 2 authors in automation, and 2 authors in manufacturing. There are 4 Indian authors, 2 Chinese authors, and 2 Japanese authors.

The total issues publicized were 18 of which the publications done by A, D, G, H are twice the papers written by the other four authors. Hence A+D+G+H has written 12 papers in total and B+C+E+F has written 6 in total. Since an author can write a minimum of 4 papers and a maximum of 3 papers. Each of A, D, G, H must have written 3 papers each.

In statement 3 it was provided that none of the Indian authors were from the Manufacturing area and none of the Japanese or Chinese authors were from the Automation area.

Since none of the Japanese and Chinese authors belonged to automation. Hence the two automation authors must be from India. In statement 1 it was given that F an Indian author is from logistics.

Of the remaining 5 authors 3 from logistics and 2 from manufacturing, in statement 5 it is given that the two Chinese authors are from different areas and hence they must be from manufacturing and logistics.

Of the remaining 3 authors 2 in logistics and 1 in manufacturing, in statement 8 is given that a Japanese author belonged to manufacturing, and hence of the remaining 2 in logistics one of them was from India and the other from Japan.

Of the four Indian authors, 2 belonged to logistics and 2 automation. Of the two authors from Japan, one belonged to manufacturing and one logistics. Of the two Chinese authors, one of them belonged to logistics and the other manufacturing.

Five papers were scheduled in each of the January and April issues, while four were scheduled in each of July and October issues.

Using statement 1, F an Indian author wrote a single paper in logistics published in October.

Using statement 2, A was from Automation and did not have a paper scheduled in October. Since A wrote 3 papers in total he must have written in the other three months and since only Indian authors worked in Automation he must have been from India.

Using statement 5, C, E are Chinese and wrote an equal number of papers. Since B+C+E+F have written a total of 6 papers. The two possibilities are 2+2+1+1 or 3+1+1+1.. Since it was given that E had papers scheduled in consecutive issues and C did not. So the only possible case is C = 2, E =2, F = 1, B = 1.

Using statement 4, A and H were from different countries and wrote papers in the same months. Hence H must be Japanese and must have written in Jan, April, July.

| Author | Country | Area of Interest | Publications | Months of publication |
|---|---|---|---|---|
| A | India | Automation | 3 | Jan, April, July |
| B | | | 1 | |
| C | Chinese | | 2 | |
| D | | | 3 | |
| E | Chinese | | 2 | |
| F | India | Logistics | 1 | October |
| G | | | 3 | |
| H | Japan | | 3 | Jan, April, July |

In statement 6, B, from the Logistics area, had a paper scheduled in the April issue of the journal.

In statement 7, B and G belonged to the same country. None of their papers were scheduled in the same issue of the journal. Since B and G belonged to the same country the only possibility is that both of them belonged to the same country and since they published Journals in different months. G must have published in January, July, and October.

In statement 8, D, a Japanese author from the Manufacturing area, did not have a paper scheduled in the July issue. Hence he must have had the three issues in Jan, April, Oct. The other Japanese author H must have written in logistics.

The fourth Indian author G must have written a paper in Automation.

In January, one more paper needs to be publicized, one in April, 1 in July, and one in October.
In statement 5, E had papers scheduled in consecutive issues of the journal but C did not.

Hence C must have written in Jan and October, and E in April and July.

In statement 9, C and H belonged to different areas. Hence C must be from Manufacturing and E must be from Logistics.

| Author | Country | Area of Interest | Publications | Months of publication |
|---|---|---|---|---|
| A | India | Automation | 3 | Jan, April, July |
| B | India | Logistics | 1 | April |
| C | China | Manufacturing | 2 | Jan, October |
| D | Japan | Manufacturing | 3 | Jan, April, October |
| E | China | Logistics | 2 | April, July. |
| F | India | Logistics | 1 | October |
| G | India | Automation | 3 | Jan, July, October |
| H | Japan | Logistics | 3 | Jan, April, July |

.Number of papers written by B, C, E, and G are: 1, 2, 2, 3

VIDEO SOLUTION

14. **C**

In the information, it is provided that there are four authors in the logistics department, 2 authors in automation, and 2 authors in manufacturing. There are 4 Indian authors, 2 Chinese authors, and 2 Japanese authors.

The total issues publicized were 18 of which the publications done by A, D, G, H are twice the papers written by the other four authors. Hence A+D+G+H has written 12 papers in total and B+C+E+F has written 6 in total. Since an author can write a minimum of 4 papers and a maximum of 3 papers. Each of A, D, G, H must have written 3 papers each.

In statement 3 it was provided that none of the Indian authors were from the Manufacturing area and none of the Japanese or Chinese authors were from the Automation area.

Since none of the Japanese and Chinese authors belonged to automation. Hence the two automation authors must be from India. In statement 1 it was given that F an Indian author is from logistics.

Of the remaining 5 authors 3 from logistics and 2 from manufacturing, in statement 5 it is given that the two Chinese authors are from different areas and hence they must be from manufacturing and logistics.

Of the remaining 3 authors 2 in logistics and 1 in manufacturing, in statement 8 is given that a Japanese author belonged to manufacturing, and hence of the remaining 2 in logistics one of them was from India and the other from Japan.

Of the four Indian authors, 2 belonged to logistics and 2 automation. Of the two authors from Japan, one belonged to manufacturing and one logistics. Of the two Chinese authors, one of them belonged to logistics and the other manufacturing.

Five papers were scheduled in each of the January and April issues, while four were scheduled in each of July and October issues.

Using statement 1, F an Indian author wrote a single paper in logistics published in October.

Using statement 2, A was from Automation and did not have a paper scheduled in October. Since A wrote 3 papers in total he must have written in the other three months and since only Indian authors worked in Automation he must have been from India.

Using statement 5, C, E are Chinese and wrote an equal number of papers. Since B+C+E+F have written a total of 6 papers. The two possibilities are 2+2+1+1 or 3+1+1+1.. Since it was given that E had papers scheduled in consecutive issues and C did not. So the only possible case is C = 2, E =2, F = 1, B = 1.

Using statement 4, A and H were from different countries and wrote papers in the same months. Hence H must be Japanese and must have written in Jan, April, July.

| Author | Country | Area of Interest | Publications | Months of publication |
|---|---|---|---|---|
| A | India | Automation | 3 | Jan, April, July |
| B | | | 1 | |
| C | Chinese | | 2 | |
| D | | | 3 | |
| E | Chinese | | 2 | |
| F | India | Logistics | 1 | October |
| G | | | 3 | |
| H | Japan | | 3 | Jan, April, July |

In statement 6, B, from the Logistics area, had a paper scheduled in the April issue of the journal.

In statement 7, B and G belonged to the same country. None of their papers were scheduled in the same issue of the journal. Since B and G belonged to the same country the only possibility is that both of them belonged to the same country and since they published Journals in different months. G must have published in January, July, and October.

In statement 8, D, a Japanese author from the Manufacturing area, did not have a paper scheduled in the July issue. Hence he must have had the three issues in Jan, April, Oct. The other Japanese author H must have written in logistics.

The fourth Indian author G must have written a paper in Automation.

In January, one more paper needs to be publicized, one in April, 1 in July, and one in October.
In statement 5, E had papers scheduled in consecutive issues of the journal but C did not.

Hence C must have written in Jan and October, and E in April and July.

In statement 9, C and H belonged to different areas. Hence C must be from Manufacturing and E must be from Logistics.

| Author | Country | Area of Interest | Publications | Months of publication |
|---|---|---|---|---|
| A | India | Automation | 3 | Jan, April, July |
| B | India | Logistics | 1 | April |
| C | China | Manufacturing | 2 | Jan, October |
| D | Japan | Manufacturing | 3 | Jan, April, October |
| E | China | Logistics | 2 | April, July. |
| F | India | Logistics | 1 | October |
| G | India | Automation | 3 | Jan, July, October |
| H | Japan | Logistics | 3 | Jan, April, July |

The publication of April has three authors from logistics. Hence false

VIDEO SOLUTION

15. **C**

In the information, it is provided that there are four authors in the logistics department, 2 authors in automation, and 2 authors in manufacturing. There are 4 Indian authors, 2 Chinese authors, and 2 Japanese authors.

The total issues publicized were 18 of which the publications done by A, D, G, H are twice the papers written by the other four authors. Hence A+D+G+H has written 12 papers in total and B+C+E+F has written 6 in total. Since an author can write a minimum of 4 papers and a maximum of 3 papers. Each of A, D, G, H must have written 3 papers each.

In statement 3 it was provided that none of the Indian authors were from the Manufacturing area and none of the Japanese or Chinese authors were from the Automation area.

Since none of the Japanese and Chinese authors belonged to automation. Hence the two automation authors must be from India. In statement 1 it was given that F an Indian author is from logistics.

Of the remaining 5 authors 3 from logistics and 2 from manufacturing, in statement 5 it is given that the two Chinese authors are from different areas and hence they must be from manufacturing and logistics.

Of the remaining 3 authors 2 in logistics and 1 in manufacturing, in statement 8 is given that a Japanese author belonged to manufacturing, and hence of the remaining 2 in logistics one of them was from India and the other from Japan.

Of the four Indian authors, 2 belonged to logistics and 2 automation. Of the two authors from Japan, one belonged to manufacturing and one logistics. Of the two Chinese authors, one of them belonged to logistics and the other manufacturing.

Five papers were scheduled in each of the January and April issues, while four were scheduled in each of July and October issues.

Using statement 1, F an Indian author wrote a single paper in logistics published in October.

Using statement 2, A was from Automation and did not have a paper scheduled in October. Since A wrote 3 papers in total he must have written in the other three months and since only Indian authors worked in Automation he must have been from India.

Using statement 5, C, E are Chinese and wrote an equal number of papers. Since B+C+E+F have written a total of 6 papers. The two possibilities are 2+2+1+1 or 3+1+1+1.. Since it was given that E had papers scheduled in consecutive issues and C did not. So the only possible case is C = 2, E =2, F = 1, B = 1.

Using statement 4, A and H were from different countries and wrote papers in the same months. Hence H must be Japanese and must have written in Jan, April, July.

| Author | Country | Area of Interest | Publications | Months of publication |
|---|---|---|---|---|
| A | India | Automation | 3 | Jan, April, July |
| B | | | 1 | |
| C | Chinese | | 2 | |
| D | | | 3 | |
| E | Chinese | | 2 | |
| F | India | Logistics | 1 | October |
| G | | | 3 | |
| H | Japan | | 3 | Jan, April, July |

In statement 6, B, from the Logistics area, had a paper scheduled in the April issue of the journal.

In statement 7, B and G belonged to the same country. None of their papers were scheduled in the same issue of the journal. Since B and G belonged to the same country the only possibility is that both of them belonged to the same country and since they published Journals in different months. G must have published in January, July, and October.

In statement 8, D, a Japanese author from the Manufacturing area, did not have a paper scheduled in the July issue. Hence he must have had the three issues in Jan, April, Oct. The other Japanese author H must have written in logistics.

The fourth Indian author G must have written a paper in Automation.

In January, one more paper needs to be publicized, one in April, 1 in July, and one in October.
In statement 5, E had papers scheduled in consecutive issues of the journal but C did not.

Hence C must have written in Jan and October, and E in April and July.

In statement 9, C and H belonged to different areas. Hence C must be from Manufacturing and E must be from Logistics.

| Author | Country | Area of Interest | Publications | Months of publication |
|---|---|---|---|---|
| A | India | Automation | 3 | Jan, April, July |
| B | India | Logistics | 1 | April |
| C | China | Manufacturing | 2 | Jan, October |
| D | Japan | Manufacturing | 3 | Jan, April, October |
| E | China | Logistics | 2 | April, July. |
| F | India | Logistics | 1 | October |
| G | India | Automation | 3 | Jan, July, October |
| H | Japan | Logistics | 3 | Jan, April, July |

.Option C is false in the issue of April there were three authors from logistics department.

VIDEO SOLUTION

16. **A**
In the information, it is provided that there are four authors in the logistics department, 2 authors in automation, and 2 authors in manufacturing. There are 4 Indian authors, 2 Chinese authors, and 2 Japanese authors.

The total issues publicized were 18 of which the publications done by A, D, G, H are twice the papers written by the other four authors. Hence A+D+G+H has written 12 papers in total and B+C+E+F has written 6 in total. Since an author can write a minimum of 4 papers and a maximum of 3 papers. Each of A, D, G, H must have written 3 papers each.

In statement 3 it was provided that none of the Indian authors were from the Manufacturing area and none of the Japanese or Chinese authors were from the Automation area.

Since none of the Japanese and Chinese authors belonged to automation. Hence the two automation authors must be from India. In statement 1 it was given that F an Indian author is from logistics.

Of the remaining 5 authors 3 from logistics and 2 from manufacturing, in statement 5 it is given that the two Chinese authors are from different areas and hence they must be from manufacturing and logistics.

Of the remaining 3 authors 2 in logistics and 1 in manufacturing, in statement 8 is given that a Japanese author belonged to manufacturing, and hence of the remaining 2 in logistics one of them was from India and the other from Japan.

Of the four Indian authors, 2 belonged to logistics and 2 automation. Of the two authors from Japan, one belonged to manufacturing and one logistics. Of the two Chinese authors, one of them belonged to logistics and the other manufacturing.

Five papers were scheduled in each of the January and April issues, while four were scheduled in each of July and October issues.

Using statement 1, F an Indian author wrote a single paper in logistics published in October.

Using statement 2, A was from Automation and did not have a paper scheduled in October. Since A wrote 3 papers in total he must have written in the other three months and since only Indian authors worked in Automation he must have been from India.

Using statement 5, C, E are Chinese and wrote an equal number of papers. Since B+C+E+F have written a total of 6 papers. The two possibilities are 2+2+1+1 or 3+1+1+1.. Since it was given that E had papers scheduled in consecutive issues and C did not. So the only possible case is C = 2, E =2, F = 1, B = 1.

Using statement 4, A and H were from different countries and wrote papers in the same months. Hence H must be Japanese and must have written in Jan, April, July.

| Author | Country | Area of Interest | Publications | Months of publication |
|---|---|---|---|---|
| A | India | Automation | 3 | Jan, April, July |
| B | | | 1 | |
| C | Chinese | | 2 | |
| D | | | 3 | |
| E | Chinese | | 2 | |
| F | India | Logistics | 1 | October |
| G | | | 3 | |
| H | Japan | | 3 | Jan, April, July |

In statement 6, B, from the Logistics area, had a paper scheduled in the April issue of the journal.

In statement 7, B and G belonged to the same country. None of their papers were scheduled in the same issue of the journal. Since B and G belonged to the same country the only possibility is that both of them belonged to the same country and since they published Journals in different months. G must have published in January, July, and October.

In statement 8, D, a Japanese author from the Manufacturing area, did not have a paper scheduled in the July issue. Hence he must have had the three issues in Jan, April, Oct. The other Japanese author H must have written in logistics.

The fourth Indian author G must have written a paper in Automation.

In January, one more paper needs to be publicized, one in April, 1 in July, and one in October.
In statement 5, E had papers scheduled in consecutive issues of the journal but C did not.

Hence C must have written in Jan and October, and E in April and July.

In statement 9, C and H belonged to different areas. Hence C must be from Manufacturing and E must be from Logistics.

| Author | Country | Area of Interest | Publications | Months of publication |
|---|---|---|---|---|
| A | India | Automation | 3 | Jan, April, July |
| B | India | Logistics | 1 | April |
| C | China | Manufacturing | 2 | Jan, October |
| D | Japan | Manufacturing | 3 | Jan, April, October |
| E | China | Logistics | 2 | April, July. |
| F | India | Logistics | 1 | October |
| G | India | Automation | 3 | Jan, July, October |
| H | Japan | Logistics | 3 | Jan, April, July |

In Automation, there are a total of 6 papers, Logistics 7 papers, and Manufacturing a total of 5 papers.

VIDEO SOLUTION

17. **D**

It is given that none of the streets has more than one team traveling along it in any direction at any point in time (point 1), which implies at 9.00 hrs, all 4 teams have chosen different roots from the starting point.

It is also known that Teams 2 and 3 are the only ones in stations E and D respectively at 10:00 hrs, and Team 1 and Team 4 are the only teams that patrol the street connecting stations A and E.

It is only possible when Team 2 traveled (A-E) via F, and Team 3 reached station D via station C.

It is also known that Teams 1 and 3 are the only ones in Station E at 10:30 hrs, and Team 4 never passes through Stations B, D, or F. Hence, Team 1 must have chosen the (A-B) root at the starting point, and Team 4 has chosen the (A-E) root at 9.00 hrs.

Hence, Team 1 will reach B at 9.30, and come to A at 10.00 hrs. After that, they will go to E at 10.30 hrs.

Since Team 4 never passes through stations B, D, or F. Team 4 only can pass through stations A, E, and C.

Hence, the roots of team 4 to reach station E at 11.30 will be (A-E-A-C-A-E) or (A-E-A-E-A-E).

Since team 1 is already traveling to E from A at 10.00 hrs, at that time team 4 can't choose the same route. Hence, the final route for team 4 to reach E at 11.30 is (A-E-A-C-A-E), and at 12.00 hrs, team 4 will come back to station A.

Hence, the complete route diagram for team 4 is (A-E-A-C-A-E-A)

| Teams | 9.00 | 9.30 | 10.00 | 10.30 | 11.00 | 11.30 | 12.00 |
|---|---|---|---|---|---|---|---|
| 1 | A | B | A | E | | | |
| 2 | A | F | E | | | | |
| 3 | A | C | D | | | | |
| 4 | A | E | A | C | A | E | A |

We can see that team 1 is at station E at 10.30 hrs, and they will reach station B at 11.30 hrs, which is only possible when they travel to B via A.

Hence, the complete route diagram for team 1 is (A-B-A-E-A-B-A). It is also known that Teams 1 and 3 are the only ones in station E at 10:30 hrs.

| Teams | 9.00 | 9.30 | 10.00 | 10.30 | 11.00 | 11.30 | 12.00 |
|---|---|---|---|---|---|---|---|
| 1 | A | B | A | E | A | B | A |
| 2 | A | F | E | | | | |
| 3 | A | C | D | E | | | |
| 4 | A | E | A | C | A | E | A |

The only possible root for Team 2 at 10.00 hrs is from E to F since they can't choose E to D because Team 3 is already on this route. Since team 3 has to reach A at 12.00. The only possible combination for team 3 is E-D-C-A

| Teams | 9.00 | 9.30 | 10.00 | 10.30 | 11.00 | 11.30 | 12.00 |
|---|---|---|---|---|---|---|---|
| 1 | A | B | A | E | A | B | A |
| 2 | A | F | E | F | | | |
| 3 | A | C | D | E | D | C | A |
| 4 | A | E | A | C | A | E | A |

Now the roots for team 2 going back to A is from F at 10.30 hrs (F-A-F-A) or (F-E-F-A).

Hence, the final table is given below:

| Teams | 9.00 | 9.30 | 10.00 | 10.30 | 11.00 | 11.30 | 12.00 |
|---|---|---|---|---|---|---|---|
| 1 | A | B | A | E | A | B | A |
| 2 | A | F | E | F | A/E | F | A |
| 3 | A | C | D | E | D | C | A |
| 4 | A | E | A | C | A | E | A |

From the table, we can see that a 10.15 hrs, team 3 is travelling from station D to station E.

The correct option is D

VIDEO SOLUTION

18. **D**

It is given that the applications are scheduled for processing in twenty 15-minute slots starting at 9:00 am and ending at 2:00 pm. Ten applications are scheduled in each slot.

Hence, the total number of applicants = (20*10) = 200. It is also known that 50% of the applications were US applications, and the number of US applications was the same in all the slots. The same was true for the other three categories.

Hence, the number of total number of US applicants = (200*50%) = 100, and the number of US applicants in each slot = (100/20) = 5

It is also known that Ira, Vijay, and Nandini were scheduled for Schengen visa processing in that order. They had a 9:15 am slot. Since the number of Schengen applicants was the same in all the slots, it implies the number of Schengen applicants in each slot is at least 3.

Similarly, it is given that Mahira and Osman were scheduled in the 9:30 am slot on that day for visa processing in the Others category, which implies the number of other category applicants in each slot is at least 2. Since the number of total applicants in each slot is 10, this implies the number of Schengen and other applicants in each slot is 3, and 2, respectively. Hence, the number of UK applicants is 0 in each slot.

It is also known that the number of total counters is 10, among which four are dedicated to US applications, and two each for UK applications, Schengen applications, and Others applications. It is given that each US and UK application requires 10 minutes of processing time, and Vijay was called to a counter at 9:25 am. (Who is 5th in the queue). It can only be possible when the processing time of Schengen applications is 12.5 minutes.

| US (10 min) | | | | Schengen (12.5 min) | | Others (5 min process) | |
|---|---|---|---|---|---|---|---|
| End Time | | | | End Time | | End Time | |
| C1 | C2 | C3 | C4 | C1 | C2 | C1 | C2 |
| 9.10 | 9.10 | 9.10 | 9.10 | 9.12.30 | 9.12.30 | 9.05 | 9.05 |
| 9.20 | 9.25 | 9.25 | 9.25 | 9.25 | 9.32.30 | 9.20 | 9.20 |
| 9.30 | 9.35 | 9.40 | 9.40 | 9.37.30 | 9.45 | 9.35 | 9.35 |
| 9.40 | 9.45 | 9.50 | 9.55 | | | | |
| 9.55 | 9.55 | 10.00 | 10.05 | | | | |
| 10.10 | 10.10 | 10.10 | 10.15 | | | | |
| 10.20 | | | | | | | |
| | | | | | | | |

On a particular day, Ira, Vijay, and Nandini were scheduled for Schengen visa processing in that order. They had a 9:15 am slot but entered the VPO at 9:20 am. When they entered the office, exactly six out of the ten counters were either processing applications, or had finished processing one and ready to start processing the next. Hence, at 9.20 am, there are exactly four free counters. Out of these 4, 2 is the UK counter, and the other two are other counters. (Since the US counters and Schengen Counters were either processing applications, or had finished processing one and were ready to start processing the next.)

Nandini's position was sixth in the queue in the Schengen Applications. From the table, we can see that her process will end at 9.45 am.

The correct option is D

VIDEO SOLUTION

19. **C**

It is given that

1 burger takes 10 minutes

1 ice cream takes 2 minutes and 3 portions of fries take 5 min by the machine (operator is not required).

Anish or Bani cannot start preparing a new order while a previous order is being prepared.

The first order will be completely done at 10:10.

The second order is two fries and one ice cream, which will be done by 10:15.

The third order is one 1 burger and 1 portion of fries.

The burger will take 10 minutes, by which fries will be ready.

Thus, the third order will be completed by 10:25.

VIDEO SOLUTION

20. **A**
It is given that

1 burger takes 10 minutes

1 ice cream takes 2 minutes and 3 portions of fries take 5 min by the machine (operator is not required).

The employees are allowed to process multiple orders at a time, but the preference would be to finish orders of clients who placed their orders earlier.

The first order is 1 burger, 1 ice cream and 3 portions of fries.

Anish can start working on the burger and Bani can start working on the ice cream for the first client at 10:00.

The burger will be done at 10:10, ice - cream at 10:02 and fries at 10:05.

The second order is placed at 10:05. (ice cream and fries)

Bani can work on the ice cream for the second client at 10:05 and also put the fries.

The ice cream will be done by 10:07 but the fries will be done by 10:10.

Thus, order will be completed by 10:10.

VIDEO SOLUTION

**Daily Free CAT Practice Tests**

21. **B**
If all the doctors served the patients one after the other, then in 2.5 hrs, Ben will serve 15 patients, Kane will serve 10 patients and Wayne will serve 6 patients.

Ben will earn = 15*100=Rs 1500

Kane will earn = 10*200=Rs 2000

Wayne will earn = 6*300=Rs 1800

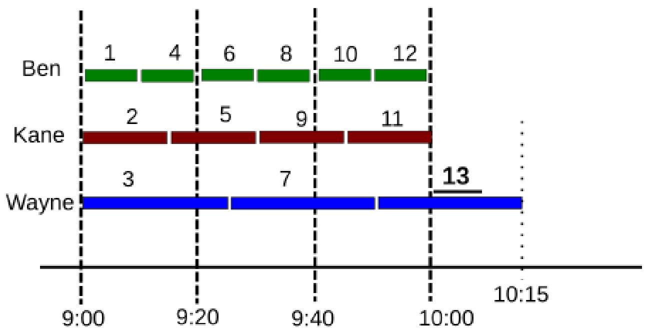
So Kane will earn the maximum amount in consultation charges on that day.

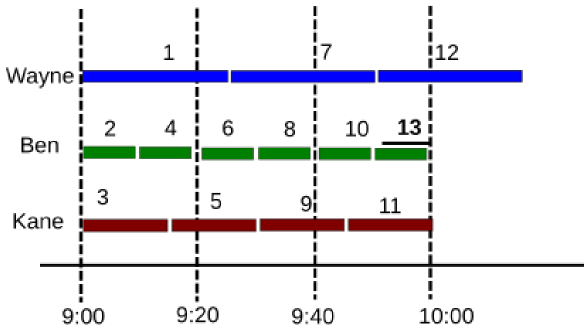
Option B

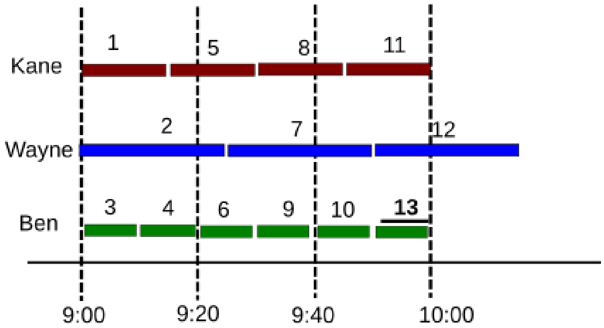
VIDEO SOLUTION

22. **C**
Mr Singh is 13th in the sequence on all the three days.

The following table will show the sequence for Monday, Wednesday and Friday.







He will stay the longest when the 13th guy is served by Doctor Wayne.

From the table, on Monday he had to wait at the clinic for the maximum duration: till 10:15.

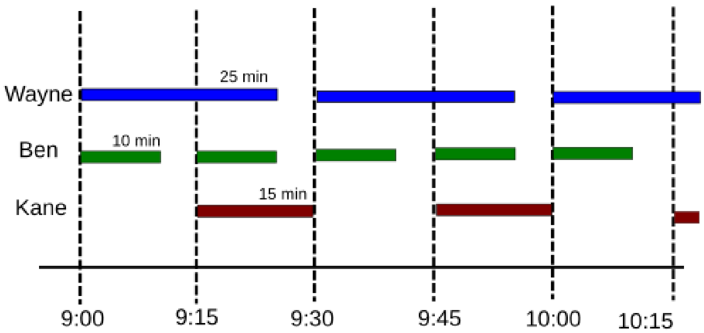
Option C

VIDEO SOLUTION

23. **D**

On Thursday, the preference order for the patients is Wayne, Ben and Kane.

The first two customers will be served by Wayne and Ben. While Kane will be empty for the first 15 mins. Then he and Ben will serve the next two customers and Wayne will be empty for 5 minutes as shown in the figure below.



As we can see that the cycle will repeat after every 30 mins.

So all three doctors are never simultaneously free.

Option D

VIDEO SOLUTION

24. **B**

| | | |
|---|---|---|
| P (2) | Sociology | B, C |
| Q (1) | Anthropology/ Sociology | Either F or G |
| R (2) | Economics | A, Either of D/ E/ H |
| S (1) | Sociology/ Anthropology | G/ F |
| T (2) | Economics | Any two of the D/ E/ H |

As we can clearly say from here that H/D/E are all economics students. Hence Option B is definitely correct

VIDEO SOLUTION

25. **D**

| | | |
|---|---|---|
| P (2) | Sociology | B, C |
| Q (1) | Anthropology/ Sociology | Either F or G |
| R (2) | Economics | A, Either of D/ E/ H |
| S (1) | Sociology/ Anthropology | G/ F |
| T (2) | Economics | Any two of the D/ E/ H |

| 09:00 | | | 09:30 | | | 10:00 | | | 10:30 | | |
|---|---|---|---|---|---|---|---|---|---|---|---|
| Teacher | Student | Subject | Teacher | Student | Subject | Teacher | Student | Subject | Teacher | Student | Subject |
| T | | Economics | T | | Economics | R | A | Economics | R | | Economics |
| | | Sociology | | B | Sociology | | | | | F | Anthropology |
| | | | | G | Sociology | | | | | | |

Now D is scheduled in a slot later than Q. Q can mentor only F or G, but obviously he can't mentor F because F is in the last slot, hence Q will mentor G. In that scenario D has to take the 10:30 slot which means D will be mentored by R and E/H will be mentored by T. So statement 1 and statement 2 both are correct.

VIDEO SOLUTION

26. **C**

| | | |
|---|---|---|
| P (2) | Sociology | B, C |
| Q (1) | Anthropology/ Sociology | Either F or G |
| R (2) | Economics | A, Either of D/ E/ H |
| S (1) | Sociology/ Anthropology | G/ F |
| T (2) | Economics | Any two of the D/ E/ H |

| 09:00 | | | 09:30 | | | 10:00 | | | 10:30 | | |
|---|---|---|---|---|---|---|---|---|---|---|---|
| Teacher | Student | Subject | Teacher | Student | Subject | Teacher | Student | Subject | Teacher | Student | Subject |
| T | | Economics | T | | Economics | R | A | Economics | R | | Economics |
| | | Sociology | | B | Sociology | | | | | F | Anthropology |
| | | | | G | Sociology | | | | | | |

If E and Q are scheduled in the same slot, they both can be in the last slot. In that case E will be guided by R and both D and H will be guided by T. Moreover if they are in the second slot, E will be guided by T and atleast one of D and H will be guided by T. Hence option (c) is correct

VIDEO SOLUTION

27. **B**

It is given that none of the streets has more than one team traveling along it in any direction at any point in time (point 1), which implies at 9.00 hrs, all 4 teams have chosen different roots from the starting point.

It is also known that Teams 2 and 3 are the only ones in stations E and D respectively at 10:00 hrs, and Team 1 and Team 4 are the only teams that patrol the street connecting stations A and E.

It is only possible when Team 2 traveled (A-E) via F, and Team 3 reached station D via station C.

It is also known that Teams 1 and 3 are the only ones in Station E at 10:30 hrs, and Team 4 never passes through Stations B, D, or F. Hence, Team 1 must have chosen the (A-B) root at the starting point, and Team 4 has chosen the (A-E) root at 9.00 hrs.

Hence, Team 1 will reach B at 9.30, and come to A at 10.00 hrs. After that, they will go to E at 10.30 hrs.

Since Team 4 never passes through stations B, D, or F. Team 4 only can pass through stations A, E, and C.

Hence, the roots of team 4 to reach station E at 11.30 will be (A-E-A-C-A-E) or (A-E-A-E-A-E).

Since team 1 is already traveling to E from A at 10.00 hrs, at that time team 4 can't choose the same route. Hence, the final route for team 4 to reach E at 11.30 is (A-E-A-C-A-E), and at 12.00 hrs, team 4 will come back to station A.

Hence, the complete route diagram for team 4 is (A-E-A-C-A-E-A)

| Teams | 9.00 | 9.30 | 10.00 | 10.30 | 11.00 | 11.30 | 12.00 |
|---|---|---|---|---|---|---|---|
| 1 | A | B | A | E | | | |
| 2 | A | F | E | | | | |
| 3 | A | C | D | | | | |
| 4 | A | E | A | C | A | E | A |

We can see that team 1 is at station E at 10.30 hrs, and they will reach station B at 11.30 hrs, which is only possible when they travel to B via A.

Hence, the complete route diagram for team 1 is (A-B-A-E-A-B-A). It is also known that Teams 1 and 3 are the only ones in station E at 10:30 hrs.

| Teams | 9.00 | 9.30 | 10.00 | 10.30 | 11.00 | 11.30 | 12.00 |
|---|---|---|---|---|---|---|---|
| 1 | A | B | A | E | A | B | A |
| 2 | A | F | E | | | | |
| 3 | A | C | D | E | | | |
| 4 | A | E | A | C | A | E | A |

The only possible root for Team 2 at 10.00 hrs is from E to F since they can't choose E to D because Team 3 is already on this route. Since team 3 has to reach A at 12.00. The only possible combination for team 3 is E-D-C-A

| Teams | 9.00 | 9.30 | 10.00 | 10.30 | 11.00 | 11.30 | 12.00 |
|---|---|---|---|---|---|---|---|
| 1 | A | B | A | E | A | B | A |
| 2 | A | F | E | F | | | |
| 3 | A | C | D | E | D | C | A |
| 4 | A | E | A | C | A | E | A |

Now the roots for team 2 going back to A is from F at 10.30 hrs (F-A-F-A) or (F-E-F-A).

Hence, the final table is given below:

| Teams | 9.00 | 9.30 | 10.00 | 10.30 | 11.00 | 11.30 | 12.00 |
|---|---|---|---|---|---|---|---|
| 1 | A | B | A | E | A | B | A |
| 2 | A | F | E | F | A/E | F | A |
| 3 | A | C | D | E | D | C | A |
| 4 | A | E | A | C | A | E | A |

From the table, we can see that among the options station E is visited the largest number of times.

VIDEO SOLUTION

28. **A**

It is given that there were a total of 3 rooms and seven candidates. Ganeshan said that he was one among the two candidates allotted to Room 102 whereas Erina said that she is the only person in the room she was allotted to. Therefore, we can say that there were 1 and 4 candidates in either 101 or 103 room. But it is given that Balaram was the third person to enter in the Room 101 therefore we can say that there were 4 candidates in Room 101 and only 1 candidate in room 103.

| Room no. | Candidates | Name |
|---|---|---|
| 101 | 4 | |
| 102 | 2 | |
| 103 | 1 | |

Fatima said that three people including Akhil were already in the room that I was allotted to when I entered it. Hence, we can say that Fatima was the last person to enter in 101 and Akhil is the first person who entered in room 101.

Chitra said that she was the last person to enter the room she was allotted to. Hence, we can say that Chitra was allotted room no 102 and she entered after Ganeshan.

Erina was the only person in room no 103.

| Room no. | Candidates | Name (In sequential order) |
|---|---|---|
| 101 | 4 | Akhil, ______, ______, Fatima |
| 102 | 2 | Ganeshan, Chitra |
| 103 | 1 | Erina |

Balaram said he was third to enter room no 101. Hence, we can say that Divya was second person who entered in room 101.

Since Chitra and Fatima were already in by 7:40 AM we can say that the candidate who entered at 7:45 am is Erina.

| Room no. | Candidates | Name (In sequential order) |
|---|---|---|
| 101 | 4 | Akhil(7:10), Divya, Balaram, Fatima(7:40) |
| 102 | 2 | Ganeshan, Chitra(7:30) |
| 103 | 1 | Erina(7:45) |

From the table we can see that Erina reached the venue at 7:45 am. Hence, option A is the correct answer.

VIDEO SOLUTION

29. **D**

It is given that there were a total of 3 rooms and seven candidates. Ganeshan said that he was one among the two candidates allotted to Room 102 whereas Erina said that she is the only person in the room she was allotted to. Therefore, we can say that there were 1 and 4 candidates in either 101 or 103 room. But it is given that Balaram was the third person to enter in the Room 101 therefore we can say that there were 4 candidates in Room 101 and only 1 candidate in room 103.

| Room no. | Candidates | Name |
|---|---|---|
| 101 | 4 | |
| 102 | 2 | |
| 103 | 1 | |

Fatima said that three people including Akhil were already in the room that I was allotted to when I entered it. Hence, we can say that Fatima was the last person to enter in 101 and Akhil is the first person who entered in room 101.

Chitra said that she was the last person to enter the room she was allotted to. Hence, we can say that Chitra was allotted room no 102 and she entered after Ganeshan.

Erina was the only person in room no 103.

| Room no. | Candidates | Name (In sequential order) |
|---|---|---|
| 101 | 4 | Akhil, ______, ______, Fatima |
| 102 | 2 | Ganeshan, Chitra |
| 103 | 1 | Erina |

Balaram said he was third to enter room no 101. Hence, we can say that Divya was second person who entered in room 101.

Since Chitra and Fatima were already in by 7:40 AM we can say that the candidate who entered at 7:45 am is Erina.

| Room no. | Candidates | Name (In sequential order) |
|---|---|---|
| 101 | 4 | Akhil(7:10), Divya, Balaram, Fatima(7:40) |
| 102 | 2 | Ganeshan, Chitra(7:30) |
| 103 | 1 | Erina(7:45) |

From the table we can see that Ganeshan is the first person to enter in room 102.Hence, option D is the correct answer.

VIDEO SOLUTION

30. **A**

It is given that there were a total of 3 rooms and seven candidates. Ganeshan said that he was one among the two candidates allotted to Room 102 whereas Erina said that she is the only person in the room she was allotted to. Therefore, we can say that there were 1 and 4 candidates in either 101 or 103 room. But it is given that Balaram was the third person to enter in the Room 101 therefore we can say that there were 4 candidates in Room 101 and only 1 candidate in room 103.

| Room no. | Candidates | Name |
|---|---|---|
| 101 | 4 | |
| 102 | 2 | |
| 103 | 1 | |

Fatima said that three people including Akhil were already in the room that I was allotted to when I entered it. Hence, we can say that Fatima was the last person to enter in 101 and Akhil is the first person who entered in room 101.

Chitra said that she was the last person to enter the room she was allotted to. Hence, we can say that Chitra was allotted room no 102 and she entered after Ganeshan.

Erina was the only person in room no 103.

| Room no. | Candidates | Name (In sequential order) |
|---|---|---|
| 101 | 4 | Akhil, ______, ______, Fatima |
| 102 | 2 | Ganeshan, Chitra |
| 103 | 1 | Erina |

Balaram said he was third to enter room no 101. Hence, we can say that Divya was second person who entered in room 101.

Since Chitra and Fatima were already in by 7:40 AM we can say that the candidate who entered at 7:45 am is Erina.

| Room no. | Candidates | Name (In sequential order) |
|---|---|---|
| 101 | 4 | Akhil(7:10), Divya, Balaram, Fatima(7:40) |
| 102 | 2 | Ganeshan, Chitra(7:30) |
| 103 | 1 | Erina(7:45) |

From the table we can see that Divya was allotted room no 101. Hence, option A is the correct answer.

VIDEO SOLUTION

31. **D**

In the information, it is provided that there are four authors in the logistics department, 2 authors in automation, and 2 authors in manufacturing. There are 4 Indian authors, 2 Chinese authors, and 2 Japanese authors.

The total issues publicized were 18 of which the publications done by A, D, G, H are twice the papers written by the other four authors. Hence A+D+G+H has written 12 papers in total and B+C+E+F has written 6 in total. Since an author can write a minimum of 4 papers and a maximum of 3 papers. Each of A, D, G, H must have written 3 papers each.

In statement 3 it was provided that none of the Indian authors were from the Manufacturing area and none of the Japanese or Chinese authors were from the Automation area.

Since none of the Japanese and Chinese authors belonged to automation. Hence the two automation authors must be from India. In statement 1 it was given that F an Indian author is from logistics.

Of the remaining 5 authors 3 from logistics and 2 from manufacturing, in statement 5 it is given that the two Chinese authors are from different areas and hence they must be from manufacturing and logistics.

Of the remaining 3 authors 2 in logistics and 1 in manufacturing, in statement 8 is given that a Japanese author belonged to manufacturing, and hence of the remaining 2 in logistics one of them was from India and the other from Japan.

Of the four Indian authors, 2 belonged to logistics and 2 automation. Of the two authors from Japan, one belonged to manufacturing and one logistics. Of the two Chinese authors, one of them belonged to logistics and the other manufacturing.

Five papers were scheduled in each of the January and April issues, while four were scheduled in each of July and October issues.

Using statement 1, F an Indian author wrote a single paper in logistics published in October.

Using statement 2, A was from Automation and did not have a paper scheduled in October. Since A wrote 3 papers in total he must have written in the other three months and since only Indian authors worked in Automation he must have been from India.

Using statement 5, C, E are Chinese and wrote an equal number of papers. Since B+C+E+F have written a total of 6 papers. The two possibilities are 2+2+1+1 or 3+1+1+1.. Since it was given that E had papers scheduled in consecutive issues and C did not. So the only possible case is C = 2, E =2, F = 1, B = 1.

Using statement 4, A and H were from different countries and wrote papers in the same months. Hence H must be Japanese and must have written in Jan, April, July.

| Author | Country | Area of Interest | Publications | Months of publication |
|---|---|---|---|---|
| A | India | Automation | 3 | Jan, April, July |
| B | | | 1 | |
| C | Chinese | | 2 | |
| D | | | 3 | |
| E | Chinese | | 2 | |
| F | India | Logistics | 1 | October |
| G | | | 3 | |
| H | Japan | | 3 | Jan, April, July |

In statement 6, B, from the Logistics area, had a paper scheduled in the April issue of the journal.

In statement 7, B and G belonged to the same country. None of their papers were scheduled in the same issue of the journal. Since B and G belonged to the same country the only possibility is that both of them belonged to the same country and since they published Journals in different months. G must have published in January, July, and October.

In statement 8, D, a Japanese author from the Manufacturing area, did not have a paper scheduled in the July issue. Hence he must have had the three issues in Jan, April, Oct. The other Japanese author H must have written in logistics.

The fourth Indian author G must have written a paper in Automation.

In January, one more paper needs to be publicized, one in April, 1 in July, and one in October.
In statement 5, E had papers scheduled in consecutive issues of the journal but C did not.

Hence C must have written in Jan and October, and E in April and July.

In statement 9, C and H belonged to different areas. Hence C must be from Manufacturing and E must be from Logistics.

| Author | Country | Area of Interest | Publications | Months of publication |
|---|---|---|---|---|
| A | India | Automation | 3 | Jan, April, July |
| B | India | Logistics | 1 | April |
| C | China | Manufacturing | 2 | Jan, October |
| D | Japan | Manufacturing | 3 | Jan, April, October |
| E | China | Logistics | 2 | April, July. |
| F | India | Logistics | 1 | October |
| G | India | Automation | 3 | Jan, July, October |
| H | Japan | Logistics | 3 | Jan, April, July |

There are no authors from Manufacturing in the July issue and hence option D is false.

VIDEO SOLUTION

32. **8**

In the information, it is provided that there are four authors in the logistics department, 2 authors in automation, and 2 authors in manufacturing. There are 4 Indian authors, 2 Chinese authors, and 2 Japanese authors.

The total issues publicized were 18 of which the publications done by A, D, G, H are twice the papers written by the other four authors. Hence A+D+G+H has written 12 papers in total and B+C+E+F has written 6 in total. Since an author can write a minimum of 4 papers and a maximum of 3 papers. Each of A, D, G, H must have written 3 papers each.

In statement 3 it was provided that none of the Indian authors were from the Manufacturing area and none of the Japanese or Chinese authors were from the Automation area.

Since none of the Japanese and Chinese authors belonged to automation. Hence the two automation authors must be from India. In statement 1 it was given that F an Indian author is from logistics.

Of the remaining 5 authors 3 from logistics and 2 from manufacturing, in statement 5 it is given that the two Chinese authors are from different areas and hence they must be from manufacturing and logistics.

Of the remaining 3 authors 2 in logistics and 1 in manufacturing, in statement 8 is given that a Japanese author belonged to manufacturing, and hence of the remaining 2 in logistics one of them was from India and the other from Japan.

Of the four Indian authors, 2 belonged to logistics and 2 automation. Of the two authors from Japan, one belonged to manufacturing and one logistics. Of the two Chinese authors, one of them belonged to logistics and the other manufacturing.

Five papers were scheduled in each of the January and April issues, while four were scheduled in each of July and October issues.

Using statement 1, F an Indian author wrote a single paper in logistics published in October.

Using statement 2, A was from Automation and did not have a paper scheduled in October. Since A wrote 3 papers in total he must have written in the other three months and since only Indian authors worked in Automation he must have been from India.

Using statement 5, C, E are Chinese and wrote an equal number of papers. Since B+C+E+F have written a total of 6 papers. The two possibilities are 2+2+1+1 or 3+1+1+1.. If all the doctors served the patients one after the other, then in 2.5 hrs, Ben will serve 15 patients, Kane will serve 10 patients and Wayne will serve 6 patients.

A total of 31 patients can be served on a particular day.

VIDEO SOLUTION

34. **A**

It is given that there were a total of 3 rooms and seven candidates. Ganeshan said that he was one among the two candidates allotted to Room 102 whereas Erina said that she is the only person in the room she was allotted to. Therefore, we can say that there were 1 and 4 candidates in either 101 or 103 room. But it is given that Balaram was the third person to enter in the Room 101 therefore we can say that there were 4 candidates in Room 101 and only 1 candidate in room 103.

| Room no. | Candidates | Name |
|---|---|---|
| 101 | 4 | |
| 102 | 2 | |
| 103 | 1 | |

Fatima said that three people including Akhil were already in the room that I was allotted to when I entered it. Hence, we can say that Fatima was the last person to enter in 101 and Akhil is the first person who entered in room 101.

Chitra said that she was the last person to enter the room she was allotted to. Hence, we can say that Chitra was allotted room no 102 and she entered after Ganeshan.

Erina was the only person in room no 103.

| Room no. | Candidates | Name (In sequential order) |
|---|---|---|
| 101 | 4 | Akhil, ______, ______, Fatima |
| 102 | 2 | Ganeshan, Chitra |
| 103 | 1 | Erina |

Balaram said he was third to enter room no 101. Hence, we can say that Divya was second person who entered in room 101.

Since Chitra and Fatima were already in by 7:40 AM we can say that the candidate who entered at 7:45 am is Erina.

| Room no. | Candidates | Name (In sequential order) |
|---|---|---|
| 101 | 4 | Akhil(7:10), Divya, Balaram, Fatima(7:40) |
| 102 | 2 | Ganeshan, Chitra(7:30) |
| 103 | 1 | Erina(7:45) |

In the question it is given that Ganeshan entered the venue before Divya. Therefore, we can say that Ganesh must have entered with Akhil at 7:10 am. In that case, Divya and Balaram must have entered at 7:15 am and 7:25 am respectively. Hence, option A is the correct answer.
