Explanations

1. **B**

Total investment in year 1995 = $7081.6 + 2923.1 = 10004.7$

Total electricity and thermal investment in year 1995 for both villages = $815.2 + 632.4 + 2065.8 + 1232.7 = 4726.1$

Percentage investment = $\frac{4726.1}{10004.7} \times 100$

Through approximation method, we can say that above value will be less than 50 and more than 47
Hence among all options, B will be most appropriate answer.

[VIEW SOLUTION](#)

2. **A**

Increase in 1996 compared to 1995 for khammam = $8352 - 7081.6 = 1270.4$

With approximation method, we can say that %increase is above 17 and lower than 18.

Hence for 1997 investment will be have an increment of 18% nearly

So in 1997, investment = $8352(1 + \frac{18}{100}) = 9855$ crore (nearly)

[VIEW SOLUTION](#)

3. **B**

In Electricity, the increase in investment is 300, which is less than 15%.

In Chemical, the increase is 241.1, which is greater than 32%.

In Thermal, there was a decrease in investment.

In Solar, the increase is 428.6, which is less than 32%.

In Nuclear, the increase in investment is 507.8, which is less than 31%.

Hence, the investment is the highest in chemical core area.

[VIEW SOLUTION](#)

4. **D**

Total investment in 1996 = $3489.5 + 8352 = 11841.5$

Total investment in 1995 = $7081.6 + 2923.1 = 10004.7$

change = 1836.8

$$\% \text{change} = \frac{1836.8}{10004.7} \times 100$$

As we can see with approximation method that above value will be less than 20 and more than 18
Hence most appropriate answer will be D) = 18

[VIEW SOLUTION](#)

5. **C**

Total investment in chittoor = $2923.1 + 3489.5 = 6412.6$

Total investment in khammam = $7081.6 + 8352 = 15433.6$

Ratio = $15433.6 \div 6412.6 = 2.4$ (nearly)

[VIEW SOLUTION](#)

6. **D**

For the security issued in 4th June 2003, the value of non-competitive bids accepted in the first round is less than that in the second round. Hence option D is not true.

[VIEW SOLUTION](#)

7. **C**

The security issued in June 2003 had lower maturity in 2nd round but no. of bids were more. Hence option C.

[VIEW SOLUTION](#)

8. **B**

Only one security issued in 17 July 2002 was undersubscribed.

[VIEW SOLUTION](#)

9. **A**

In dec 2002, 19 % of all spam mails were from health category and In jun 2003, 18 % of all spam mails were from health category. Now since the total spam mails received in dec 02 were greater than that in jun 03. Number of spam mails in health category in dec 02 will be greater than that in jun 03.

[VIEW SOLUTION](#)

10. **D**

Since we don't know by how much more total spam mails were received in Sep 02 as compared to mar 03 we can't compare the number of spam emails in financial category received in September 2002 as to that in March 2003. Hence option D.

[VIEW SOLUTION](#)

11. **C**

It is clear from the table that for products category the percentage of spam mail is increasing from sep02 to June 03 . But the rate at which it is growing is decreasing. Hence option c .

[VIEW SOLUTION](#)

12. **D**

We can't say anything regarding exports and imports as the value given is export intensity and import intensity . Also statement C is clearly false. And we can infer option D easily from the table.

[VIEW SOLUTION](#)

13. **B**

We know that $\text{Import} / \text{sales} = 14.2$ and $\text{total import} = 20.2 * \text{cost of raw material} + 17.6 * \text{gross fixed assets} = 20.2 * 0.5 * \text{sales} + 17.6 * \text{GFA} = 14.2 * \text{sales}$. Solving this we get $17.6 * \text{GFA} = 4.1 * \text{sales}$. So required value is $17.6 / 4.1 = 4.3$. Hence option B .

[VIEW SOLUTION](#)

14. **A**

We know that growth rate in deficit intensity can be calculated as $\text{GD}i = (\text{DI}i - \text{DI}(i-1)) / \text{DI}(i-1)$, so in year 1994-95 we have $\text{GDI} = (6.3 - 5.1) / 5.1 = \text{max out of all others}$.Hence option A.

[VIEW SOLUTION](#)

15. **D**

We know that highest growth rate in deficit intensity was in the year 94-95 which is equal to $1.2 * 100 / 5.1 = 23.5\%$. hence option D.

[VIEW SOLUTION](#)

CAT Score Calculator

16. **A**

Highest percentage growth in the total IT business, relative to the previous year was achieved in 95-96 which is equal to $(2886 - 2041) / 2041 = 845 / 2041 = 41.4\%$

[VIEW SOLUTION](#)

17. **D**

IT business hardware activity in

$$1995-96 = 1037 + 35 = 1072$$

$$1996-97 = 1050 + 286 = 1336$$

$$1997-98 = 1205 + 201 = 1406$$

$$1998-99 = 1026 + 4 = 1030$$

We clearly see from the table that for IT hardware business activity 1996-97 dominates 1998-99. Hence option D is false.

[VIEW SOLUTION](#)

18. **B**

Total annual exports lay of the total annual business of the IT industry in 96-97 can be given as $1383/3807 = 0.36 = 36\%$ also total annual exports lay of the total annual business of the IT industry in 97-98 can be given as $1970/5031 = 0.39 = 39\%$. Hence option b.

[VIEW SOLUTION](#)

19. C

We can clearly see that option A and B are false. Also after adding we can verify that IT business in training during 1994- 1999 was higher than the total IT business in maintenance during the same period.

IT Training = $107+143+185+263+302 = 1000$

IT Maintenance = $142+172+182+221+236 = 953$

Hence option C.

[VIEW SOLUTION](#)

20. D

Hardware in 96-97 = $1050 + 286 = 1336$

Hardware in 95-96 = $1037 + 35 = 1072$

Peripherals in 96-97 = 195

Peripherals in 95-96 = 202

So, hardware dominates in 96-97 compared to 95-96 but the same is not true for peripherals. Thus, 96-97 cannot be said to dominate 95-96. Thus, A is not true.

The same is the case for options B and C. Thus, D is the right choice.

[VIEW SOLUTION](#)

21. D

The per capita of each of the following years is given below.

1984-85 is Rs. 3,098

1985-86 is Rs. 3,482

1986-87 is Rs. 3,786

1987-88 is Rs. 4,203

1988-89 is Rs. 4,857

1989-90 is Rs. 5,319

Hence, the percapita income is highest for the year 1989-90

[VIEW SOLUTION](#)

22. D

The per capita of each of the following years is given below.

1984-85 is Rs. 3,098

1985-86 is Rs. 3,482 (increased by Rs. 384)

1986-87 is Rs. 3,786 (increased by Rs. 304)

1987-88 is Rs. 4,203 (increased by Rs. 416)

1988-89 is Rs. 4,857 (increased by Rs. 653)

1989-90 is Rs. 5,339 (increased by Rs. 481)

Hence, the increase is highest for the year 1988-89

[VIEW SOLUTION](#)

23. **D**

The per capita of each of the following years is given below.

1984-85 is Rs. 3,098

1985-86 is Rs. 3,482 (increased by 12.42%)

1986-87 is Rs. 3,786 (increased by 8.73%)

1987-88 is Rs. 4,203 (increased by 11.00%)

1988-89 is Rs. 4,857 (increased by 15.55%)

1989-90 is Rs. 5,339 (increased by 9.92%)

The percentage increase in population over the years is fairly constant and varied between 1% and 2%. But the percentage increase in GDP per capita in the year 1988-89 is significantly higher. Hence, the correct answer is 1988-89

[VIEW SOLUTION](#)

24. **A**

The population increase for the year 1985-86 from the year 1984-85 is just one crore.

In every other year, the population increase was either 1.5 crore or 2 crores.

Note that the denominators for each of the years (ie total population) is fairly same.

Hence, the correct answer is 1985-86

[VIEW SOLUTION](#)

25. **B**

For increment in 1986-87, denominator is increased by 2 whereas in every other year it is either increased by 1 or 1.5

Since numerator has increased by 30, which is similar to that of other years, we can say lowest increment occur in the year 1986-1987.

[VIEW SOLUTION](#)

26. **C**

For the above answer, the ratio of number of rooms to the cost should be maximum. It is maximum for lokhandwala group which is $536/225 = 2.38$

[VIEW SOLUTION](#)

27. **A**

The cost per room equals (total cost)/(total rooms)

To calculate the least cost per room, we have to only check IHCL and Lokhandwala Group. A simple inspection will remove all other companies as they have more cost and lesser rooms than either of the two.

Cost per room of IHCL = $275/600 = 45.83$ lakhs

Cost per room of Lokhandwala = $225/536 = 41.97$ lakhs.

Hence, the cost per room is least for Lokhandwala Group.

[VIEW SOLUTION](#)

28. C

Total cost in 1997 = 250 + 225 = 475 Crores.

These projects were completed in 1998 => Interest for 1 year must be added to the cost.

$$\text{Interest} = \frac{475 \times 1 \times 10}{100} = 47.5 \text{ Crores}$$

Total Amount = 475 + 47.5 = 522.5 Crores.

[VIEW SOLUTION](#)

29. A

All the projects are completed by 2000. Hence, we need to add the costs of all the projects.

On adding all the costs we get Rs 1785 Crores.

[VIEW SOLUTION](#)

30. A

Total cost of projects that were completed in 1999 is 275 + 235 + 250 + 300 = Rs 1060 Crores.

Interest for 2 years must also be added to this cost => $1060(1 + (0.1))^2 = 1060 \times 1.21 = \text{Rs } 1282.6 \text{ Crores}$

[VIEW SOLUTION](#)

CAT Daily Targets

Step by step, heading towards 99+ percentile

31. D

In this data, all the tariff rates are given. The table does not mention the consumption of electricity in any of the given years. Hence the consumption cannot be determined.

[VIEW SOLUTION](#)

32. A

$$\text{Average tariff in Sector 1 in 1994-95} = \frac{425+472+420+415+440}{5} = 434.4 \text{ P/kWh}$$

$$\text{Average tariff in Sector 1 in 1991-92} = \frac{\frac{425}{1.15} + \frac{472}{1.05} + \frac{420}{0.96} + \frac{415}{1.08} + \frac{440}{1.1}}{5} = 408.4 \text{ P/kWh}$$

$$\text{Change} = 434.4 - 408.4 = 26 \text{ P/kWh}$$

$$\% \text{ Change} = \frac{26}{408.4} \times 100 = 6.5\%$$

[VIEW SOLUTION](#)

33. B

$$\text{Average tariff in region 4} = \frac{415+423+441+451}{4} = \frac{1730}{4} = 432.5 \text{ p/kWh} \Rightarrow \text{A is wrong.}$$

In all the four sectors, tariff in region 2 is higher than tariff in region 5.

=> Average tariff in region 2 is higher than average tariff in region 5 => Option B is correct.

[VIEW SOLUTION](#)

34. D

As we do not know the population of the urban sector and its usage of current, we cannot determine the total cost.

[VIEW SOLUTION](#)

35. B

Average tariff in sector 3 = $(428/1.08 + 478/.96 + 432/1.06 + 441/1.1 + 439/1.08)/5 = 421.8 \sim 420$

[VIEW SOLUTION](#)

36. A

Since the consumer price indices for all years change, the ratios will remain the same as before.

Value of the agricultural loans in 1980 at 1983 prices = $498.4 * 149 / 131 = 570$ approx.

[VIEW SOLUTION](#)

37. D

Number of loans in 1970 = $90 * 28 = 2520$

Number of loans in 1971 = $115 * 39 = 4485$

Number of loans in 1972 = $130 * 52 = 6760$

Number of loans in 1974 = $260 * 98 = 25480$

Number of loans in 1975 = $318 * 121 = 38478$

Number of loans in 1980 = $605 * 288 = 174240$

Number of loans in 1981 = $665 * 312 = 207480$

So, the maximum increase in number of loans is in 1980 - 81

[VIEW SOLUTION](#)

38. B

Number of loans in 1970 = $90 * 28 = 2520$

Number of loans in 1971 = $115 * 39 = 4485$

Number of loans in 1972 = $130 * 52 = 6760$

Number of loans in 1974 = $260 * 98 = 25480$

Number of loans in 1975 = $318 * 121 = 38478$

Number of loans in 1980 = $605 * 288 = 174240$

Sum of these loans = 251963

Number of loans in 1983 = $840 * 380 = 319200$

Ratio = $\frac{251963}{319200} = 80\%$ approximately.

[VIEW SOLUTION](#)

39. B

Change = $211.6 - 18.3 = 193.3$

% increase = $\frac{193.3}{18.3} * 100 = 1056\%$

This is distributed over 13 years $\Rightarrow$ Average yearly increment = $\frac{1056}{13} = 81\%$

[VIEW SOLUTION](#)

40. C

The second column in the rural bank loans gives us the average number of loans, which is same as the number of rural bank loans per rural bank.

This field is least in 1970.

Hence, 1970 is the answer.

[VIEW SOLUTION](#)

41. A

Difference between CPI of 1983 and 1975 = $149 - 78 = 71$

If CPI of 1970, which is 43, is changed to 105, then the value of 71 changes to $\frac{105}{43} * 71 = 174$

[VIEW SOLUTION](#)

42. B

To change the prices from one year to another year, we have to use the Consumer Price Index.

Value in 1983 = 915.7 millions

CPI in 1983 = 149

CPI in 1970 = 43

Required value in 1970 = $\frac{43}{149} * 915.7 = \text{Rs } 264 \text{ million}$

[VIEW SOLUTION](#)

43. A

Total loan from rural in 1974 = $260 \times 98 \times 243 = 6 \text{ million (nearly)}$

Loan for agriculture in 1974 = 34.5 million

Total = $34.5 + 6 = 40.5$

%Agriculture loan = $\frac{34.5}{40.5} \times 100 = 85\% \text{ (Nearly)}$

[VIEW SOLUTION](#)

44. B

64.75% population is below 35 years age.

The number of people aged below 35 years is 400 million.

So total number of people are, suppose $x = \frac{400 \times 100}{64.75}$

Now below 15 years of age we have $f/m = 0.96$ so $f = (m+f)*0.96/1.96$ and $m+f = 30*400/64.75$

Solving we get, $f = 30*400*0.96/(64.75*1.96) = 90.8$

Hence option B .

[VIEW SOLUTION](#)

45. D

Investment has increased for all the companies.

[VIEW SOLUTION](#)

46. B

Investments of A, B and C = $6.7 + 7.5 + 12.5 = 26.7$

Investments of A, B and C = $5.6 + 17.4 + 25.3 = 48.3$

Difference = 21.6

% difference = $\frac{21.6}{26.7} * 100 = 80.8\%$

[VIEW SOLUTION](#)

47. B

Total investment of E = 57.8 Billion

Total investment of F = 93.2 Billion

Ratio = $57.8 : 93.2 = 19:31$

[VIEW SOLUTION](#)

48. C

Total investment by B, C, D and E in year 1 = 24.11 Billion

Total investment by B, C, D and E in year 3 = 77.4 Billion

Increase = $77.4 - 24.11 = 53.29$ Billion

% Increase = $\frac{53.29}{24.11} * 100 = 221\%$

[VIEW SOLUTION](#)

49. C

Total contribution in year 2 = $6.7 + 7.5 + 12.5 + 5.6 + 17.4 + 25.3 = 75$ billion

Contribution by D in year 2 = 5.6

% contribution by D = $\frac{5.6}{75} * 100 = 7.4\%$

[VIEW SOLUTION](#)

50. D

Efficiency = $\frac{\text{revenue}}{\text{expenses}}$

In 2000, except Rest of the world, all the other operation have an efficiency of greater than 1.

Efficiency of Rest of the Worls = $\frac{20}{33}$, which is the least.

[VIEW SOLUTION](#)

100+ CAT Quant Questions

51. B

$$\text{Profitability} = \frac{\text{Net Income After Taxes}}{\text{Expenses}}$$

In 2000, Spain had the best profitability of 225/43.

Hence option B.

[VIEW SOLUTION](#)

52. B

There are 4 such operations - North Africa & Middle East, Argentina, Rest of Latin America and Far East - that registered a sustained yearly increase in income before taxes and charges from 1998 to 2000.

[VIEW SOLUTION](#)

53. B

Spain and rest of latin america has witnessed more than 200% increase in revenue from 1999 to 2000 for the company.

[VIEW SOLUTION](#)

54. D

In 1998, the efficiency in Rest of Latin America was $\frac{34}{57}$.

In 1998, the efficiency in Rest of the world was $\frac{5}{15}$, which is less than $\frac{34}{57}$.

Hence, the efficiency of rest of latin america was not the least.

[VIEW SOLUTION](#)

55. C

5% of total revenue in the year 1999 is 168.7 . Manually counting number of countries where the revenue is less than 168.7, we see that 4 countries have revenue less than 168.7

[VIEW SOLUTION](#)

100+ CAT DILR Questions

56. B

Profitability for the North Sea operations in 1998 was 20/52 and in the year 1999 was 54/65 . Hence we can clearly see that the profitability increased. hence option B.

[VIEW SOLUTION](#)

57. B

Percentage increase in net income before tax and charges for total world (1998-99)

$$= \frac{1375 - 248}{248} * 100 = 454.4\%$$

Spain is making loss.

Percentage increase for North Africa and Middle-East = $\frac{341-111}{111} * 100 = 207.2\%$

Percentage increase for Argentina = $\frac{838-94}{94} * 100 = 791.5\%$

From the table one can directly say that there is no operation other than Argentina, whose percentage increase in net income before taxes and charges is higher than the average (world).

 [VIEW SOLUTION](#)

58. A

The improvement index for a category is the maximum percentage increase in sales from 2019 to 2020 among any of its subcategories.

Hence based on the information provided in the tabular data we need to look for the different subcategories where the rise in sales from 2019 to 2020 is higher.

Based on the visual data :

In the furniture category :

Bookcases and Chairs have a relatively high percentage increase :

Books cases: 1.9 million to 2.2 million (15.7 percent increase)

Chairs: 6.2 million to 7 million (12.9 percent increase)

In the office supply category :

Binders and Appliances have a relatively high percentage increase :

Binders: 3.6 million to 5.3 million (47 percent increase)

Appliances: 1.9 million to 3.15 million (65.7 percent increase)

In technology product category :

Accessories: 3.1 to 4.4 million. (41.9 percent increase)

Phones: 5.8 million to 7.7 million (32.7 percent increase)

Hence among the categories :

The highest increase among them is in the order :

Furniture < Technology product < office supply.

 [VIDEO SOLUTION](#)

59. C

The total sales from products in the office supply category in 2019 is :

Sum of sales of :

Binders: 3.6 million

Art : 0.4 million.

Appliances: 1.9 million

Envelops: 0.3 million

Fasteners: 0.1 million

Labels: 0.2 million

Paper = 1.5 million.

Storage: 4.3 million.

Supplies: 1.1 million.

The sum of sales of these products = $3.6+0.4+1.9+0.3+0.1+0.2+1.5+4.3+1.1 = 13.4$ million.

The closest among the option is 13.5 million.

 VIDEO SOLUTION

60. 1

The number of subcategories had sales of ₹ 4 million or more in 2019 and registered an increase in sales in excess of 25% in 2020 :

The subcategories with more than 4 million in sales in 2019 are :

Chairs: 6.2 million in 2019 and 7 million in 2020. (For a 25 percent increase the sales must be at least 7.8 million and hence fails)

Tables: 4.4 million in 2019 and 4.5 million in 2020. (For a 25 percent increase the sales must be at least 5.5 million and hence fails)

Storage: 4.3 million sales in 2019 and 5.1 million in 2020. (For a 25 percent increase the sales must be at least 5.4 and hence fails)

Phones: 5.75 million in 2019 and 7.5 million in 2020. (An increase of 30.5 percent)

Hence only one subcategory satisfies the condition.

 VIDEO SOLUTION

100+ CAT VARC Questions

61. B

The percentage increase in sales in the furniture category from 2019 to 2020 are :

Bookcases: 1.9 million in 2019 and 2.2 million in 2020.

Chairs: 6.2 million in 2019 and 7 million in 2020.

Furnishings: 2.05 million in 2019 and 2.1 million in 2020.

Tables: 4.4 million in 2019 and 4.5 million in 2020.

Hence the percentage increase is given by :

$$\frac{((2.2+7+2.1+4.5)-(1.9+6.2+2.05+4.4))}{1.9+6.2+2.05+4.4} \cdot 100 = \frac{125}{14.55} = 8.53\%$$

 VIDEO SOLUTION

62. B

When challenging project is given, each employee gets 40 points.

When standard project is given, each employee gets 25 points.

Suppose:

If a particular employee is involved in all standard projects then his credit points will be: 125

If a particular employee is involved in 4 standard projects and 1 challenging project then his credit points will be: 140

If a particular employee is involved in 3 standard projects and 2 challenging projects then his credit points will be: 155

If a particular employee is involved in 2 standard projects and 3 challenging projects then his credit points will be: 170

If a particular employee is involved in 1 standard project and 4 challenging projects then his credit points will be: 185

If a particular employee is all challenging projects then his credit points will be: 200

Hence, an employee cannot earn 150 points.

 VIDEO SOLUTION

63. B

The table looks like this in Month 1.

	SE	RE
T1	4	1
T2	3	1
T3	2	2
T4	1	3
T5	0	4

Table in month 2. (after exchanging employees according to conditions)

	SE	RE
T1	1	3
T2	4	1
T3	2	2
T4	2	2
T5	1	3

Table in month 3.

	SE	RE
T1	0	4
T2	1	3
T3	4	1
T4	3	1
T5	2	2

Table in month 4.

	SE	RE
T1	0	4
T2	1	3
T3	2	2
T4	5	0
T5	2	2

Table in month 5.

	SE	RE
T1	0	4
T2	0	4
T3	2	2
T4	4	0
T5	4	1

T2 remained unchanged in Month 3 and Month 4, and composition of T4 was never unchanged. Hence (1,0)

 VIDEO SOLUTION

64. **A**

The table looks like this in Month 1.

	SE	RE
T1	4	1
T2	3	1
T3	2	2
T4	1	3
T5	0	4

Table in month 2. (after exchanging employees according to conditions)

	SE	RE
T1	1	3
T2	4	1
T3	2	2
T4	2	2
T5	1	3

Table in month 3.

	SE	RE
T1	0	4
T2	1	3
T3	4	1
T4	3	1
T5	2	2

Table in month 4.

	SE	RE
T1	0	4
T2	1	3
T3	2	2
T4	5	0
T5	2	2

Table in month 5.

	SE	RE
T1	0	4
T2	0	4
T3	2	2
T4	4	0
T5	4	1

Refer to table of Month 3, the number of SE employees in T1 and T5 are respectively (0,2)

 VIDEO SOLUTION

65. D

Check option A,

It is possible to move to T2 after working in T1 for the first month. From T2, either movement to T3 or T4 is possible. If moved to T3, then in next month he can move to T4, because of challenging project. Hence this option can be true.

Check option B,

It is possible to move to T2 after working in T1 for the first month. From T2, either movement to T3 or T4 is possible. If moved to T4, next movement can be in T5. Hence this option can be true.

Check option C,

T2, T3, T4, T5. This sequential movement is also possible.

Check option D,

If Aneek is there in T1 for the first month, then he will shift to T2, T5 or remain in T1 in the subsequent month.

Consider he remained in T1, then he will either move to T5 or remain in T1. So, if this happens the sequence given in option can never follow.

Suppose he has shifted to T2, but T2 is not mentioned in option, so ruled out.

And if he moved to T5, in the next month then he will remain there only.

Hence option D is not correct.

66. B

In the year 1990, total increment will be $4+2.25+0.6+0.9 = 7.75$

And in the year 1991, total increment be $3.75+3+0.8+1.05=8.60$

Hence total increase in estimated cost will be = 16.35 Lakhs

[VIDEO SOLUTION](#)

67. B

	1988	1989	1990	1991	
Cements	-	95	80	75	
Steel	-	70	45	60	
Bricks	-	15	12	16	
Building Materials	-	25	18	21	
Labour	2.1	25	20	18	
Total	2.1	230	175	190	=597.1

Till third year expense was 407.1 and total expenditure is 597.1

So ratio will be $\frac{407.1}{597.1} = 0.7$

That will be fraction of length which is supposed to be completed by third year

[VIDEO SOLUTION](#)

68. A

Total estimated cost before increment = $52.1+267.5+196.4+209.5 = 725.5$

Increment in contingencies will be = 25.2

Hence, total estimated cost will also be increased with the same amount.

So percentage increment in total estimated cost will be = $\frac{25.2}{725.5} \times 100 = 3.47$

[VIDEO SOLUTION](#)

69. B

It is said that till 1990, all estimated cost has been spent i.e. 725.5

Then 209.5 is spent in the year 1991. Hence, that will be exceeding the cost.

So percentage increase will be = $\frac{209.5}{725.5} \times 100 = 29$

[VIDEO SOLUTION](#)

70. B

	1988	1989	1990	1991	
Cements	-	95	80	75	=250
Steel	-	70	45	60	=175
Bricks	-	15	12	16	=43
Other Building Materials	-	25	18	21	=64
Labour	2.1	25	20	18	=65.1
Total	2.1	230	175	190	=597.1

Total material for all the years will be = $250+175+43+64 = 532$

Total labour cost for all the years = 65.1

Hence ratio will be $\frac{65.1}{532}$ nearly equal to 8:1.

 VIDEO SOLUTION

71. C

Total expenditure is = $52.1 + 267.5 + 196.4 + 209.5 = 725.5$

So 25.5 will be cut off on administration equally in all years.

Hence in 1989 cut off will be $\frac{25.5}{4} = 6.375$

Percentage cut off will be = $\frac{6.375}{15} \times 100 = 42.5$

 VIDEO SOLUTION

72. B

Fixed costs in 2006 are consumables, rent of building, rates and taxes, repair and maintenance expenses and selling and marketing expenses. We can see this from the trend followed in the years 2002-2006.

Fixed costs in 2006 = $1400 + 1200 + 400 + 800 + 5800 = 9600$

We can see that that material, labour and operation costs depend on no. of units.

If we take units = x .

Total cost of these 3 materials is $50x + 20x + 30x = 100x$ and remaining fixed cost taking same as in 2006 we get, $9600 + 100x$, but here $x = 1400$.

We have total cost per unit $(9600 + 100 \times 1400) / 1400 = 107$ (approx).

Hence option B.

 VIDEO SOLUTION

73. E

Fixed costs in 2006 are consumables, rent of building, rates and taxes, repair and maintenance expenses and selling and marketing expenses. We can see this from the trend followed in the years 2002-2006.

Fixed costs in 2006 = $1400 + 1200 + 400 + 800 + 5800 = 9600$ => fixed costs in 2007 are same.

We can see that that material, labour and operation costs depend on no. of units.

If we take units = x .

Total cost of these 3 materials is $50x + 20x + 30x = 100x$ and remaining fixed cost taking same as in 2006 we get, $9600 + 100x$.

Selling price is reduced by 5% => $SP = 125 * 0.95 = \text{Rs } 118.75$

Profit = $118.75x - 100x - 9600 = 18.75x - 9600$

Profit will be maximum when x is maximum

=> 2000 units.

 VIDEO SOLUTION

74. B

Fixed costs in 2006 are consumables, rent of building, rates and taxes, repair and maintenance expenses and selling and marketing expenses. We can see this from the trend followed in the years 2002-2006.

Fixed costs in 2006 = $1400 + 1200 + 400 + 800 + 5800 = 9600$ => fixed costs in 2007 are same.

We can see that that material, labour and operation costs depend on no. of units.

If we take units = x.

Total cost of these 3 materials is $50x + 20x + 30x = 100x$ and remaining fixed cost taking same as in 2006 we get, $9600 + 100x$.

Selling price = $125 - 5 = \text{Rs } 120$.

Profit = $120x - 100x - 9600 = 20x - 9600$

When $x = 1700$ => Profit = $20 * 1700 - 9600 = 34000 - 9600 = \text{Rs } 24400$.

 VIDEO SOLUTION

75. C

Fixed costs in 2006 are consumables, rent of building, rates and taxes, repair and maintenance expenses and selling and marketing expenses. We can see this from the trend followed in the years 2002-2006.

Fixed costs in 2006 = $1400 + 1200 + 400 + 800 + 5800 = 9600$ => fixed costs in 2007 are same.

We can see that that material, labour and operation costs depend on no. of units.

If we take units = x.

Total cost of these 3 materials is $50x + 20x + 30x = 100x$ and remaining fixed cost taking same as in 2006 we get, $9600 + 100x$.

As the selling price is 125, we have $100x + 9600 < 125 * x$.

Solving this we get $x = 384$.

Hence option C.
